faculties of the mind of how we think speak and see the world Ray Jackendoff starts out by looking at languages and what the meanings of words and sentences actually do He shows that meanings are more adaptive and complicated than they are commonly given credit for and he is led to some basic questions How do we perceive and act in the world How do we talk about it And how can the collection of neurons in the brain give rise to conscious experience As it turns out the organization of language thought and perception does not look much like the way we experience things and only a small part of what the brain does is conscious Jackendoff concludes that thought and meaning must be almost completely unconscious What we experience as rational conscious thought which we prize as setting us apart from the animals in fact rides on a foundation of unconscious intuition Rationality amounts to intuition enhanced by language Written with an informality that belies both the originality of its insights and the radical nature of its conclusions **A User's Guide to Thought and Meaning** is the author's most important book since the groundbreaking **Foundations of Language** in 2002
