Turing Pioneer Of The Information Age:

Turing B. Jack Copeland, 2012-11-29 In the centenary of Alan Turing's birth we celebrate the life and work of one of the greatest scientists of the 20th century. Best known for the role he played in cracking German secret code Enigma during World War Two and the personal tragedy of his death aged only 41, this is an insight into the man, his work and his legacy.

Birth of Modern Facts James W. Cortada, 2023-01-09 For over twenty years James W. Cortada has pioneered research into how information shapes society. In this book he tells the story of how information evolved since the mid nineteenth century. Cortada argues that information increased in quantity, became more specialized by discipline (e.g. mathematics, science, political science) and more organized. Information increased in volume due to a series of innovations such as the electrification of communications and the development of computers, but also due to the organization of facts and knowledge by discipline, making it easier to manage and access. He looks at what major disciplines have done to shape the nature of modern information, devoting chapters to the most obvious ones. Cortada argues that understanding how some features of information evolved is useful for those who work in subjects that deal with their very construct and application, such as computer scientists and those exploring social media, and most recently history. The Birth of Modern Facts builds on Cortada's prior books examining how information became a central feature of modern society, most notably as a sequel to All the Facts: A History of Information in the United States since 1870 (OUP, 2016) and Building Blocks of Society: History, Information, Ecosystems and Infrastructures (Routledge, 2021).

Turing's Revolution Giovanni Sommaruga, Thomas Strahm, 2016-01-21 This book provides an overview of the confluence of ideas in Turing's era and work and examines the impact of his work on mathematical logic and theoretical computer science. It combines contributions by well-known scientists on the history and philosophy of computability theory as well as on generalised Turing computability. By looking at the roots and at the philosophical and technical influence of Turing's work, it is possible to gather new perspectives and new research topics which might be considered as a continuation of Turing's working ideas well into the 21st century. Turing's Vision Chris Bernhardt, 2016-05-13 In 1936, when he was just twenty-four years old, Alan Turing wrote a remarkable paper in which he outlined the theory of computation, laying out the ideas that underlie all modern computers. This groundbreaking and powerful theory now forms the basis of computer science. In Turing's Vision, Chris Bernhardt explains the theory, Turing's most important contribution, for the general reader. Bernhardt argues that the strength of Turing's theory is its simplicity and that explained in a straightforward manner, it is eminently understandable by the nonspecialist. As Marvin Minsky writes, "The sheer simplicity of the theory's foundation and extraordinary short path from this foundation to its logical and surprising conclusions give the theory a mathematical beauty that alone guarantees it a permanent place in computer theory." Bernhardt begins with the foundation and systematically

builds to the surprising conclusions He also views Turing's theory in the context of mathematical history other views of computation including those of Alonzo Church Turing's later work and the birth of the modern computer In the paper *On Computable Numbers with an Application to the Entscheidungsproblem* Turing thinks carefully about how humans perform computation breaking it down into a sequence of steps and then constructs theoretical machines capable of performing each step Turing wanted to show that there were problems that were beyond any computer's ability to solve in particular he wanted to find a decision problem that he could prove was undecidable To explain Turing's ideas Bernhardt examines three well known decision problems to explore the concept of undecidability investigates theoretical computing machines including Turing machines explains universal machines and proves that certain problems are undecidable including Turing's problem concerning computable numbers

A Biography of the Pixel Alvy Ray Smith, 2021-08-03 The pixel as the organizing principle of all pictures from cave paintings to Toy Story The Great Digital Convergence of all media types into one universal digital medium occurred with little fanfare at the recent turn of the millennium The bit became the universal medium and the pixel a particular packaging of bits conquered the world Henceforward nearly every picture in the world would be composed of pixels cell phone pictures app interfaces Mars Rover transmissions book illustrations videogames In *A Biography of the Pixel* Pixar cofounder Alvy Ray Smith argues that the pixel is the organizing principle of most modern media and he presents a few simple but profound ideas that unify the dazzling varieties of digital image making Smith's story of the pixel's development begins with Fourier waves proceeds through Turing machines and ends with the first digital movies from Pixar DreamWorks and Blue Sky Today almost all the pictures we encounter are digital mediated by the pixel and irretrievably separated from their media museums and kindergartens are two of the last outposts of the analog Smith explains engagingly and accessibly how pictures composed of invisible stuff become visible that is how digital pixels convert to analog display elements Taking the special case of digital movies to represent all of Digital Light his term for pictures constructed of pixels and drawing on his decades of work in the field Smith approaches his subject from multiple angles art technology entertainment business and history *A Biography of the Pixel* is essential reading for anyone who has watched a video on a cell phone played a videogame or seen a movie 400 pages of annotations prepared by the author and available online provide an invaluable resource for readers

Alan Turing's Manchester Jonathan Swinton, 2022-05-26 Alan Turing is a patron saint of Manchester remembered as the Mancunian who won the war invented the computer and was all but put to death for being gay Each myth is related to a historical story This is not a book about the first of those stories of Turing at Bletchley Park But it is about the second two which each unfolded here in Manchester of Turing's involvement in the world's first computer and of his refusal to be cowed about his sexuality Manchester can be proud of Turing but can we be proud of the city he encountered

The Literary Review, 2012 *Artificial Intelligence, Evolutionary Computing and Metaheuristics* Xin-She Yang, 2012-07-27 Alan Turing pioneered many research areas such as artificial intelligence computability heuristics and

pattern formation Nowadays at the information age it is hard to imagine how the world would be without computers and the Internet Without Turing's work especially the core concept of Turing Machine at the heart of every computer mobile phone and microchip today so many things on which we are so dependent would be impossible 2012 is the Alan Turing year a centenary celebration of the life and work of Alan Turing To celebrate Turing's legacy and follow the footsteps of this brilliant mind we take this golden opportunity to review the latest developments in areas of artificial intelligence evolutionary computation and metaheuristics and all these areas can be traced back to Turing's pioneer work Topics include Turing test Turing machine artificial intelligence cryptography software testing image processing neural networks nature inspired algorithms such as bat algorithm and cuckoo search and multiobjective optimization and many applications These reviews and chapters not only provide a timely snapshot of the state of art developments but also provide inspiration for young researchers to carry out potentially ground breaking research in the active diverse research areas in artificial intelligence cryptography machine learning evolutionary computation and nature inspired metaheuristics This edited book can serve as a timely reference for graduates researchers and engineers in artificial intelligence computer sciences computational intelligence soft computing optimization and applied sciences

Alan Turing and His Contemporaries Martin Campbell-Kelly, Chris Burton, Roger Johnson, 2012 Secret wartime projects in code breaking radar and ballistics produced a wealth of ideas and technologies that kick started the development of digital computers By 1955 computers produced by companies such as Ferranti English Electric Elliott Brothers and the British Tabulating Machine Co had begun to appear in the market place The Information Age was dawning and Alan Turing and his contemporaries held centre stage Their influence is still discernible deep down within today's hardware and software This is a tribute not only to stars such as Tom Kilburn Alan Turing and Maurice Wilkes but to the many other scientists and engineers who made significant contributions to early computing during the period 1945-1955
