RoboCup 2004: Robot Soccer World Cup VIII Daniele Nardi, Martin Riedmiller, Claude Sammut, José Santos-Victor, 2005-03-01 These are the proceedings of the RoboCup 2004 Symposium held at the Instituto Superior Técnico in Lisbon Portugal in conjunction with the RoboCup competition. The papers presented here document the many innovations in robotics that result from RoboCup. A problem in any branch of science or engineering is how to devise tests that can provide objective comparisons between alternative methods. In recent years competitive engineering challenges have been established to motivate researchers to tackle difficult problems while providing a framework for the comparison of results. RoboCup was one of the first such competitions and has been a model for the organization of challenges following sound scientific principles. In addition to the competition the associated symposium provides a forum for researchers to present refereed papers. But for RoboCup the symposium has the greater goal of encouraging the exchange of ideas between teams so that the competition as a whole progresses from year to year and strengthens its contribution to robotics. One hundred and eighteen papers were submitted to the Symposium. Each paper was reviewed by at least two international referees. 30 papers were accepted for presentation at the Symposium as full papers and a further 38 were accepted for poster presentation. The quality of the Symposium could not be maintained without the support of the authors and the generous assistance of the referees.

The core belief that Popular Science and our readers share: The future is going to be better and science and technology are the driving forces that will help make it better. **Characterisation of Soft Magnetic Materials Under Rotational Magnetisation** Stanislaw Zurek, 2017-11-22 The book presents practical aspects related to the measurement of rotational power loss in soft magnetic materials. The book furthermore focuses on practical aspects of performing such measurements: the associated difficulties as well as solutions to the most common problems. Numerous practical aspects, hands-on experience and most commonly encountered pitfalls are heavily discussed in the book. The text begins with an introduction to magnetism, then follows with definitions of measurement methods of rotational power loss from a physical viewpoint. Two chapters describe and detail the various sensors which can be employed for such measurements as well as all the aspects of designing, making and using a magnetising apparatus. A synthesis of the likely optimal design of a magnetising apparatus is also given, preceded with the full reasoning based on all the research carried out to date. *Characterisation of Soft Magnetic Materials Under Rotational Magnetisation* serves as an excellent starting point for any student having to perform

magnetic measurements under rotational magnetisation but also under 1D 2D or 3D excitation Because the methods sensors and apparatus are extensively discussed it will also be a great reference for more senior researchers and experts in the field There is a whole chapter devoted to analysis of measurement uncertainty This subject is rarely published for magnetic measurements which makes it more difficult for all researchers to understand the concepts and methodology used in uncertainty estimation This chapter not only introduces the whole subject but also provides multiple step by step examples which can be easily followed from very simple cases to much more complex ones All equations are presented with full SI units which greatly helps in practical application of the presented methodology Each chapter is written in such a way that it can be studied on its own so that the reader can focus only on the specific aspects as required **Advances in**
