between black wire with white tracer and black wire on number 2 coil. Primary resistance should be 0.1-0.4 ohms on both coils. Renew coil(s) if not to specification.

To check secondary windings, connect tester between orange wire and end of spark plug lead on number 1 coil and black wire with white tracer and end of spark plug lead on number 2 coil. Secondary resistance should be 2700-4100 ohms on both coils. Renew coil(s) if resistance is not to specification.

RECTIFIER. Disconnect rectifier and connect tester leads according to chart in Fig. S27-13. Renew rectifier if resistance values are not as shown.

COOLING SYSTEM

WATER PUMP. A rubber impeller type water pump is mounted between drive shaft housing and gearcase. Impeller key (4—Fig. S27-14) engages impeller (3) and drive shaft causing impeller to rotate with drive shaft. If cooling system malfunction is noted, inspect water intake for plugging or partial restriction. If water intake is not restricted, check thermostat for proper operation. Refer to THERMOSTAT section. If thermostat operation is accept-

able, remove gearcase as outlined in the appropriate section and check condition of water pump, water tube, water passages and seals. Inspect impeller (3) and impeller plate (2) for excessive wear or other damage.

Install seal (6) into housing (5) with lip facing away from impeller. Apply a suitable water-resistant grease to seal lip. When installing housing over impeller, rotate drive shaft in clockwise direction in order to seat impeller vanes in the proper direction. Avoid turning drive shaft in opposite direction after water pump is reassembled. Lubricate seals (8 and 10) with a suitable water resistant grease when installing water tube.

THERMOSTAT. Cooling system is equipped with a thermostat (4—Fig. S27-15) to regulate operating temperature. Thermostat can be removed from cylinder block after removing cover (6). If thermostat malfunction is suspected, check for foreign material in thermostat valve seat. Test thermostat by suspending thermostat in water with a suitable thermometer. As water is heated, thermostat should start to open at 48°-52°C (118°-126°F). Thermostat should be renewed if opening temperature is not within specified range.
