INSTALLATION TECHNIQUES

The eventual performance of your windows and doors is greatly influenced by the quality of installation. Two main objectives should be kept in mind when installing windows.

1. Avoid distortion "out of square" and "out of plane".
2. Create an insulated, air tight joint between the window and the wall. Air leakage around windows and doors can be a major cause of uncomfortable drafts.

1. Set unit into properly prepared rough opening, 3/8" to 1" larger than frame dimension. Fold strip of building paper around outside of rough opening to seal sheathing to framing joint.

2. Level sill; shim at corners, 6" from corners on side (jamb for GoldenVinyl® and GoldenClad®) (2" for GoldenWood®), under each mullion, at centre of awning window sill, at centre of horizontal slider sill, at meeting rail of single/double hung windows, at quarter points of sill on fixed units, and approximately every 12". Ensure all frame members are square and straight. Check operation several times during installation and look for consistent clearance between sash and frame.

3. Be sure that the window or door is plumb across both diagonals. This is extremely important with entrance systems. Fasten unit to wall structure through shims. Install screws in pre-drilled holes, where applicable.

4. Loosely pack cavity with fibre insulation or low expanding foam. Avoid inward bowing of frame members. Unroll polyethylene over entire wall including window. Staple and cut even with interior trim.

5. In masonry installations, leave 1/8" clearance between frame and masonry and fill with good quality exterior caulking. BE SURE TO LEAVE A 3/8" CLEARANCE BETWEEN THE WINDOW AND MASONRY SILL TO ALLOW FOR WALL SHRINKAGE. COVER THIS CAVITY WITH CAULKING.

Improper installation and/or improper painting and finishing may void warranty.
