Wiring Cooling Fan System 1uz Fe:

Chilton's Import Car Manual, 1992-1996, 1995 Automobiles Foreign Maintenance and repair *Automotive Engineering*, 1997-07 1982-1990 Climate Control Systems Four Seasons (Restaurant), 1991 1982-1990 Import Climate Control Systems Four Seasons (Restaurant), 1991 **Advanced Electrical Cooling Fan Control System** T Fukusen, Motor Industry Research Association (MIRA), Nuneaton (GB), 1989 **NOMENCLATURE - ENGINE COOLING FAN** E-25 General Standards for Aerospace and Propulsion Systems, 1945 **Laboratory Testing of Light-Duty Vehicle Electric Cooling Fan Assemblies for Airflow Performance** Cooling Systems Standards Committee, 2019 This SAE recommended practice is intended for use in testing and evaluating the performance of light duty automotive electric engine cooling fan assemblies. These Electric Cooling Fan ECF assemblies are purchased by light duty truck and passenger car OEMs from suppliers. They are purchased as complete assemblies consisting mainly of the fan's motor's and shroud. See Figure 1. This Recommended Practice will only consider such complete assemblies. Some purchased assemblies using brush type motors may also include digital control devices such as power resistors or pulse width modulation PWM electronics or local interconnect network LIN for speed control. In the case of brushless motor technology the controller is an integral part of the motor where it also performs the commutation process electronically. The performance measurement would include fan output in terms of airflow and pressure and fan input electric power in terms of voltage and current. This information could then be used to calculate the efficiency of the assembly including aerodynamic efficiency of the fan and shroud and electrical efficiency of the motor. The electric power consumption could be used to estimate vehicle energy as it relates to electrical charging system sizing and fuel economy. The test conditions in the procedure generally will not always match those of the installation for which cooling electric energy consumption and fuel consumption information is desired. The performance of a given fan depends on the installation details of the application including the effects of system resistance and geometry of the grille, heat exchangers and underhood geometry of the engine, other underhood components and front end components. These details should be duplicated in the test setup to the greatest extent possible if accurate performance measurement is expected. Vehicle level airflow performance will also be affected by the bumper profile and any other shape that would influence how the airflow enters the grille. Minor changes have been made to this document to correct errors in grammar, spelling and punctuation. Units of measure have been changed to reflect current SAE practice. Development of the Electronically Controlled Hydraulic Cooling Fan System Tohru Hamamoto, Society of Automotive Engineers, 1990 Engine Cooling Fan Structural Analysis Cooling Systems Standards Committee, 2012 Three levels of fan structural analysis are included in this practice: 1. Initial Structural Integrity 2. In vehicle Testing 3. Durability Test Methods. The Initial Structural Integrity section describes analytical and test methods used to predict potential resonance and therefore possible fatigue accumulation. The In vehicle or machine section enumerates the general procedure used to conduct a fan strain gage test. Various considerations

that may affect the outcome of strain gage data have been described for the user of this procedure to adapt or discard depending on the particular application. The Durability Test Methods section describes the detailed test procedures that may be used depending on type of fan equipment availability and end objective. Each of the previous levels builds upon information derived from the previous level. Engineering judgment is required as to the applicability of each level to a different vehicle environment or a new fan design. This SAE Recommended Practice is applicable to medium and heavy duty trucks, buses, construction equipment, industrial and agricultural equipment. It does not necessarily include passenger cars and light trucks. The usage of nonmetallic construction necessitates areas of evaluation not required by metallic designs. Chief among these are temperature extremes, moisture content, impact resistance, chemical attack, material purity, homogeneity, and aging/weathering. Areas of evaluation affecting both metallic and nonmetallic fans but requiring somewhat different approaches with nonmetallic parts include natural frequency determination and durability testing. The technical content of J1474 Heavy Duty Nonmetallic Engine Cooling Fans: Material, Manufacturing and Test Considerations has been incorporated so both metallic and nonmetallic fans are covered by this document. Various spelling, grammar, and punctuation mistakes have been corrected.

Electric Drive Cooling Fan Motor Mounting Cooling Systems Standards Committee, 2016. This SAE Recommended Practice is applicable to Electric Drive Cooling Fan Assemblies used in Light Duty vehicle cooling systems, typically passenger cars and light duty trucks. This document outlines the Electric Drive Cooling Fan Motor Mounting interface characteristics such that a common standard is possible. Industry finds this recommended practice to be unnecessary and limiting to innovation.
