Windfall The Booming Business Of Global Warming:

Windfall McKenzie Funk, 2015-01-27 A fascinating investigation into how people around the globe are cashing in on a warming world McKenzie Funk has spent the last six years reporting around the world on how we are preparing for a warmer planet Funk shows us that the best way to understand the catastrophe of global warming is to see it through the eyes of those who see it most clearly as a market opportunity Global warming's physical impacts can be separated into three broad categories melt drought and deluge Funk travels to two dozen countries to profile entrepreneurial people who see in each of these forces a potential windfall The melt is a boon for newly arable mineral rich regions of the Arctic such as Greenland and for the surprising kings of the manmade snow trade the Israelis The process of desalination vital to Israel's survival can produce a snowlike by product that alpine countries use to prolong their ski season Drought creates opportunities for private firefighters working for insurance companies in California as well as for fund managers backing south Sudanese warlords who control local farmland As droughts raise food prices globally there is no more precious asset The deluge the rising seas surging rivers and superstorms that will threaten island nations and coastal cities has been our most distant concern but after Hurricane Sandy and failure after failure to cut global carbon emissions it is not so distant For Dutch architects designing floating cities and American scientists patenting hurricane defenses the race is on For low lying countries like Bangladesh the coming deluge presents an existential threat Funk visits the front lines of the melt the drought and the deluge to make a human accounting of the booming business of global warming By letting climate change continue unchecked we are choosing to adapt to a warming world Containing the resulting surge will be big business some will benefit but much of the planet will suffer McKenzie Funk has investigated both sides and what he has found will shock us all To understand how the world is preparing to warm Windfall follows the money [The Business Student's Guide to Sustainable Management](#) Petra Molthan-Hill, 2017-11-09 The Business Student's Guide to Sustainable Management has become a core textbook for business undergraduates With a full introduction to sustainable management the textbook covers all subject areas relevant to business students This second edition features fully updated chapters on how to integrate the Sustainable Development Goals into accounting marketing HR and other subjects in management and business studies Furthermore this second edition offers brand new chapters on how to teach the Principles for Responsible Management Education PRME in any business discipline how to explore new business models designed to support sustainable development and how to crowdsource for sustainable solutions The book contains over 40 ready made seminars short workshops which enable teachers and students to integrate the Sustainable Development Goals SDGs into every discipline in business including economics operations marketing HR and financial reporting Each chapter follows the same easy to use format The Business Student's Guide to Sustainable Management provides a true treasure chest of materials to support staff wanting to integrate sustainability into their teaching and provides support to effectively embed sustainability in the curriculum The chapters also

Political Economy Barry Clark, 2016-03-21 This nontechnical book provides a comprehensive and interdisciplinary survey of political economy that can easily be understood by any reader with an introductory level background in economics As 21st century political debate becomes polarized across ideological lines students and citizens need to understand the underlying values on which contending arguments are based The current political gridlock calls for a deeper appreciation of the competing perspectives in political economy Now revamped for a third edition Political Economy A Comparative Approach supplies a truly interdisciplinary examination of the development and evolution of political economy from the Enlightenment onward drawing material from the realms of political theory sociology philosophy and history as well as from economics to present detailed comparisons of competing perspectives on a variety of current issues The book begins with an introduction to political economy that provides readers with an overview of the historical development of the discipline followed by in depth analyses of four ideological perspectives in political economy Classical Liberalism Radicalism Conservatism and Modern Liberalism The author then applies each of the four ideological perspectives to a range of contemporary issues such as the role of government economic instability poverty labor relations discrimination education culture the environment and international trade Readers will gain insight into the methods and practice of political economics as well as better understand the history of political economic thought and the effects of historical processes European industrialization for example on modern debates

Extreme Weather and Global Media Julia Leyda, Diane Negra, 2015-06-05 In the two decades bracketing the turn of the millennium large scale weather disasters have been inevitably constructed as media events As such they challenge the meaning of concepts such as identity and citizenship for both locally affected populations and widespread spectator communities This timely collection pinpoints the features of an often overlooked yet rapidly expanding category of global media and analyzes both its forms and functions Specifically contributors argue that the intense promotion and consumption of extreme weather events takes up the slack for the public conversations society is not having about the environment and the feeling of powerlessness that accompanies the realization that anthropogenic climate change has now reached a point of no return Incorporating a range of case studies of extreme weather mediation in India the UK Germany Sweden the US and Japan and exploring recent and ongoing disasters such as Superstorm Sandy the Fukushima nuclear crisis flooding in Germany and heat waves in the UK Extreme Weather and Global Media generates valuable inquiry into the representational and social characteristics of the new culture of extreme weather

Natural Catastrophe Brian Elliott, 2016-10-26 Brian Elliott persuasively argues that climate change is not a natural phenomenon but a political

phenomenon a symptom of neoliberal governance This helps us to understand how across wealthy liberal democracies environmental concern has increasingly been framed as a consumer responsibility issue rather than as a matter of structural social political transformation Thinking of a world truly beyond climate change requires us to reimagine the state beyond its current neoliberal configuration Elliott argues that in order to achieve this environmental politics in the west needs to renew the Marxist challenge to the global market s benign production of social utility and construct a new non apocalyptic politics of nature

On Earth as in Heaven? Melanie Ross,2025-05-15 Explore the ways material economies have shaped past liturgical practices and continue to underlie our worship today Because the stuff of Christian worship is inextricably enmeshed in the marketplace it seems that our liturgical practices materiality and economics are forever intertwined In On Earth as in Heaven leading scholars who presented the 2023 Yale Institute of Sacred Music Liturgy Conference break new disciplinary ground by investigating complex dynamics of liturgical production distribution and power throughout history This collection critically engages the tension between earthly materialities and eschatological visions of Christian hope offering innovative methodologies case studies and approaches that promise to stimulate further research in liturgical studies and beyond

Eco-Nihilism Wendy Lynne Lee,2017-02-22 If we were to ask what is the root cause of our current and unprecedented environmental crisis climate change many particularly on the progressive Left would refer to the excesses of capitalism and they d be right In Eco Nihilism The Philosophical Geopolitics of the Climate Change Apocalypse Wendy Lynne Lee demonstrates that there are no versions of conquest capital compatible with the fact of a finite planet and that a logic whose operating premise is growth is destined to not only exhaust our planetary resources but also generate profound social injustice and geopolitical violence in its pursuit Nonetheless it is clear that the violence and injustice of capital is selective some benefit greatly while others are subjugated to its pathological drive to profit Hence Lee argues that any comprehensive analysis of what Jason Moore has dubbed the Capitalocene must include an equally probing account of human chauvinism that is the axes along which capital is supplied with resources and labor Defined in terms of race sex gender and species these axes come ready made to the advantage of capitalist commodification Without an understanding of how and why humanity will remain doomed to settling for a sustainably unjust world as opposed to realizing a just and desirable one Indeed on our current trajectory we may not even achieve the sustainable The introduction of climate change into the mix of environmental deterioration the ever widening economic gap between global North and global South and the accelerating violence of terrorism civil war and human slavery make of a warming planet a combustible world The only way out requires ending the myth of endless resources a rejection of climate change denial and a radical re valuation of human centeredness not as a locus of power but as an opportunity to take moral and epistemic responsibility for a world whose biotic diversity and ecological integrity make the struggle to realize it worthwhile This solution demands not only an end to capitalism but the deliberate reclamation of value aesthetic moral and civic and a radical transformation of both personal and

collective conscience Lee appeals to the experiential aesthetics of John Dewey and the feminist concept of the standpoint of the subjugated She argues for a version of the precautionary principle informed by an environmentally and socially responsible concept of the desirable future as the clearest path away from the precipice *The Progress of This Storm* Andreas Malm,2020-02-04 An attack on the idea that nature and society are impossible to distinguish from each other In a world careening towards climate chaos nature is dead It can no longer be separated from society Everything is a blur of hybrids where humans possess no exceptional agency to set them apart from dead matter But is it really so In this blistering polemic and theoretical manifesto Andreas Malm develops a counterargument in a warming world nature comes roaring back and it is more important than ever to distinguish between the natural and the social Only with a unique agency attributed to humans can resistance become conceivable **Peak Oil** Matthew Schneider-Mayerson,2015-10-14 The concept of peak oil the moment when global oil production peaks and a train of economic social and political catastrophes accompany its subsequent decline has captured the imagination of a large number of Americans and created a quiet yet intense underground movement This book delves deep inside the world of peakists showing how their hopes and fears about the postcarbon future led them to prepare for the social breakdown they foresee By exploring their worldview and the unexpected way that these fears transformed many members of this left leaning group into survivalists it builds a larger analysis of the rise of libertarianism the role of oil in modern life the political impact of digital technologies racial and gender dynamics of post apocalyptic fantasies and the social organisation of environmental denial *The Politics of Globality since 1945* Rens van Munster,Casper Sylvest,2016-05-12 This timely comprehensive and interdisciplinary volume advances an original argument about the complex roots and multiple politics of globality It shows that technological innovations and decisive developments since 1945 from the nuclear revolution to anthropogenic climate change and debates about the Anthropocene have prompted reflections on the global condition of humanity and helped reshape political communities by making the world appear small manageable and interconnected The contributors stress how human beings have transformed both their habitat and their view of human earth relations since 1945 Such changes have been accompanied by important shifts in political visions prompted new forms of human association encouraged legal and institutional reform and spurred ideas about ecological humility At the same time the spatially all encompassing nature of globality have also informed projects of human mastery and a range of practices historically associated with militarization and a strongly statist conception of national security This volume reflects on these paradoxical relationships their history and contemporary relevance Contributing to the overlapping concerns of four burgeoning fields of study across the humanities and the social sciences globality and globalization studies geopolitics and political geography Anthropocene studies global governance and political theory the book will be of great use to scholars and graduates working in these areas Becoming a Climate Scientist Kyle Dickman,2021-08-31 A hands on revealing guide to a career as a climate scientist written by acclaimed Outside

magazine writer Kyle Dickman and based on the experiences of a preeminent researcher studying permafrost in the Arctic essential reading for anyone considering a path to this timely profession Go behind the scenes and be mentored by the best in the business to find out what it s really like and what it really takes to become a climate scientist Accurate climate science is more important than ever before As awareness grows of our changing climate demand is increasing for people to study it from universities who want to have the latest cutting edge research militaries who are worried about national defense and governments who need accurate data to enact policy reform Climate scientists use both field research and complex algorithms on super computers to predict the climate of our ever changing world Acclaimed Outside magazine editor Kyle Dickman shadows climate scientist Cathy Wilson and her team who work in the farthest reaches of Alaska s northern tundra and in the national research labs in Los Alamos NM to reveal how this dream job becomes a reality Shadow top climate scientists to see how they measure snowfall assess the thawing of the permafrost and determine the water content of soil down to 1 mm accuracy Learn how the growth of one shrub can affect a whole ecosystem and how models can predict the future of our fast changing planet Here is how the job is performed at the highest level *The Time of Catastrophe* Christopher Dole,Robert Hayashi,Andrew Poe,Austin Sarat,2016-03-09 If catastrophes are by definition exceptional events of such magnitude that worlds and lives are dramatically overturned the question of timing would pose a seemingly straightforward if not redundant question The Time of Catastrophe demonstrates the analytic productiveness of this question arguing that there is much to be gained by interrogating the temporal conceits of conventional understandings of catastrophe and the catastrophic Bringing together a distinguished interdisciplinary group of scholars the book develops a critical language for examining catastrophic time recognizing the central importance of and offering a set of frameworks for examining the alluring and elusive qualities of catastrophe Framed around the ideas of Agamben Kant and Benjamin and drawing on philosophy history law political science anthropology and the arts this volume seeks to demonstrate how the question of catastrophic time is in fact a question about something much more than the frequency of disasters in our so called Age of Catastrophe Delta Futures Jason Cons,2025 A free ebook version of this title is available through Luminos University of California Press s Open Access publishing program Visit www.luminosoa.org to learn more Delta Futures explores the competing visions of the future that are crowding into the Bengal Delta s imperiled present and vying for control of its ecologically vulnerable terrain In Bangladesh s southwest development programs that imagine the delta as a security threat unfold on the same ground as initiatives that frame the delta as a conservation zone and as projects that see the delta s rivers and ports as engines for industrial growth Jason Cons explores how these competing futures are being brought to life how they are experienced understood and contested by those who live and work in the delta and the often surprising entanglements they engender between dredgers and embankments tigers and tiger prawns fishermen and forest bandits and more These future visions produce the delta as a climate frontier a zone where opportunity expropriation and risk in the

present are increasingly framed in relation to disparate visions of the delta's climate affected future Know Your World: A Geographer's Guide To The Anthropocene Age John J. Moran, 2017-01-25 Darwin named Geography as Queen of the sciences His observations of geographical connections had revealed the phenomenon of Life in a remarkably structured Earth world as inter locked dynamic systems This Systems View of Life is reviving at a time when we are facing a crisis of collapse in world systems and the prospect of a breaking world as a result of reckless human activities driven by amoral values We are all geographers embarked on a voyage in search of the optimum location with the promise of support and betterment of our future living conditions But for most of the world's people this is an experience of Life fraught with hardship and deprivation Compelled to take stock of our deteriorating environment as well as to question the values we hold the message is that we have the collective restorative power of geographical knowledge which can be applied to achieve a better world System Change Mars Robertson, 2019-09-30 Architecting Earth 2.0 Many things will have to change these are the most impactful and critical points attainable right now 1 Land use Food system Less crops to feed livestock Rebuilding soil and natural ecosystems 2 Emissions Trading System No more free allowances Unified global standard supported by enforceable sanctions 3 Energy storage and transmission You can install solar panels but it will not reduce the dependency on fossil fuels we are using peaker plants to supply electricity during peak demand The book covers many other things and many interdependencies in more detail **Field Notes from a Catastrophe** Elizabeth Kolbert, 2015-02-03 A new edition of the book that launched Elizabeth Kolbert's career as an environmental writer updated with three new chapters making it yet again irreplaceable Boston Globe Elizabeth Kolbert's environmental classic Field Notes from a Catastrophe first developed out of a groundbreaking National Magazine Award winning three part series in The New Yorker She expanded it into a still concise yet richly researched and damning book about climate change a primer on the greatest challenge facing the world today But in the years since the story has continued to develop the situation has become more dire even as our understanding grows Now Kolbert returns to the defining book of her career She has added a chapter bringing things up to date on the existing text plus three new chapters on ocean acidification the tar sands and a Danish town that's gone carbon neutral making it again a must read for our moment **Divided Environments** Jan Selby, Gabrielle Daoust, Clemens Hoffmann, 2022-09-22 An original international political ecology analysis of the implications of climate change and water scarcity for twenty first century conflict and security *The Carbon Fix* Stephanie Paladino, Shirley J Fiske, 2016-11-18 Given the growing urgency to develop global responses to a changing climate The Carbon Fix examines the social and equity dimensions of putting the world's forests and necessarily the rural people who manage and depend on them at the center of climate policy efforts such as REDD intended to slow global warming The book assesses the implications of international policy approaches that focus on forests as carbon and especially forest carbon offsets for rights justice and climate governance Contributions from leading anthropologists and geographers analyze a growing trend towards market principles

and financialization of nature in environmental governance placing it into conceptual critical and historical context The book then challenges perceptions of forest carbon initiatives through in depth field based case studies assessing projects policies and procedures at various scales from informed consent to international carbon auditing While providing a mixed assessment of the potential for forest carbon initiatives to balance carbon with social goals the authors present compelling evidence for the complexities of the carbon offset enterprise fraught with competing interests and interpretations at multiple scales and having unanticipated and often deleterious effects on the resources and rights of the world s poorest peoples especially indigenous and rural peoples The Carbon Fix provides nuanced insights into political economic and ethical issues associated with climate change policy Its case approach and fresh perspective are critical to environmental professionals development planners and project managers and to students in upper level undergraduate and graduate courses in environmental anthropology and geography environmental and policy studies international development and indigenous studies

The Fossil-Fuelled Climate Crisis Raymond Murphy, 2020-09-29 This book analyses the threat posed by the continued use of fossil fuels By utilizing Elizabeth Shove s social practices approach and Murphy s own social closure framework the book examines the accelerating treadmill of carbon polluting practices It incorporates externalities theory to investigate how the full cost of fossil fuels is paid by others rather than users and to demonstrate that the environmental commons is a medium for conveying intergenerational monopolisation and exclusion in the Anthropocene Murphy uncovers a pattern of opposition to change when exploiting valuable but dangerous resources He argues that a new faith in mastering nature is emerging as a belief in just in time technological solutions to circumvent having to change fossil fuelled practices The book then moves on to assess proposed solutions including Beck s staging of risk and his hypothesis that the anticipation of global catastrophe will incite emancipation It proposes a novel approach to enhancing foresight and avoid incubating disaster It will appeal to readers interested in an original social science analysis of this creeping crisis and its resolution
