Design and Implementation of Home Automation Control System Based on Zigbee and Transmission Control Protocol/internet Protocol Chih Wei Cheng,2016 Abstract This project discusses the Home Automation System HAS which utilizes the technology of wireless sensor network WSN The control mechanism of these systems is based on ZigBee that works in collaboration with mobile and Internet systems The input of these devices is quite different which creates challenges for the creators of the system Certain household devices are very easy to control while others have comparatively complex inputs The system should be able to control both types of devices through a singular interface This challenge is overcome by implementation of the wireless sensor nodes in a HAS A highly important advantage of using ZigBee monitoring system is energy conservation and reduction in power costs Utilization of HAS leads to a decrease in consumption of water electricity and other energy inputs a reduction of the cost of utilities and the improvement of security features The paper demonstrates that Home Automation System has numerous applications beyond control of lighting temperature and security cameras in a household The technology opens up frontiers for numerous other applications in the area of home assistance and even in home health care **Technology Review** ,2005 **PC Based Control Smart Home System Using Zigbee Wireless Technology** Thanikaikumaran R. Kuppusamy,2010 Nowadays automation system becomes the best solution to overcome human problem which is always forget to switch off the electrical appliances As we know there are a lot of types of the automation system which is too expensive and difficult to use For that reason an automation system at low cost is built where user can also program the automated system by their own The purpose of this project is to design an automation system that can be used to switch ON OFF and get know STATUS of the electrical appliances by using personal computer This project focusing developing an automation system with Zigbee wireless technology which is controlled by programmable interface controller PIC18F14K50 This overall project is divided into two parts The first part is concern on the hardware development where all electronic components are connected on a single board Personal computer is the input component while fluorescent lamp and fan are the output component where it s all controlled by controller circuit Zigbee is a new technology which has at its centre the goal of eliminating wired connections between home appliances and personal computer Instead of connecting with wires every appliance has small transmitters or receivers The second part is base on

software programming to operate the hardware structure There two types of programs are used for this project C language is the program used for PIC18F14K50 C language assembles using CCS C Compiler to get the hex file The hex file loaded into PIC memory using PIC kit 2 burners C is another program that used for create GUI for personal computer In order to achieve better automation system the security system can be added to this project where more sensor and load can be connected to the PIC serial port As the result the PIC capable to control the whole operation of this automation system
