Relevance of design patterns within web applications Niels Lange, 2011-06-22 Inhaltsangabe Abstract In 1994 the Gang of Four consisting of Erich Gamma Richard Helm Ralph Johnson and John Vlissides published the book Design Pattern Elements of Reusable Object Oriented Software Within that book the four information scientists described 23 design patterns which they classi ed into the categories Creational Design Pattern Structural Design Pattern and Behavioral Design Pattern Even though design patterns exist since 15 years at present they have not lost relevance Due to new concepts the usage of design patterns within web application is increasing Meanwhile all 23 established design patterns are available as PHP implementations Aside web languages like AJAX JavaScript XHTML and CSS also appreciate the strength of design patterns At first web languages like AJAX PHP et cetera will be analyzed if they qualify for the usage of design patterns At second the usage of design patterns within open source web applications like Typo3 Joomla Wordpress et cetera will be examined At third various web developers of 1 1 web de Telekom et cetera will be interviewed to investigate if and in which amount design patterns are used by companies Intention of this thesis is to determine the relevance of design pattern within web applications Thereby advantages will also be shown like disadvantages Also the question if design patterns should be used by

default or only if the concerning project reached a specific size will be answered
