**Smart Education and e-Learning - Smart Pedagogy** Vladimir L. Uskov, Robert J. Howlett, Lakhmi C. Jain, 2022-05-28

This book serves as a reference for researchers and practitioners in academia and industry. Smart education, smart e-learning, and smart pedagogy are emerging and rapidly growing areas that have a potential to transform existing teaching strategies, learning environments, and educational activities and technology. They are focused at enabling instructors to develop innovative ways of achieving excellence in teaching in highly technological smart university and providing students with new opportunities to maximize their success using smart classrooms, smart systems, and technology. This book contains the contributions presented at the 9th international KES conference on Smart Education and e-Learning SEEL 2022 with the Smart Pedagogy as the main conference theme. It comprises of forty-nine high-quality peer-reviewed papers that are grouped into several interconnected parts: Part 1 Smart Pedagogy, Part 2 Smart Education, Part 3 Smart e-Learning, Part 4 Smart University, Part 5 Smart Education Systems and Technology, Part 6 Digital Humanities and Social Sciences for Smart University Development, the Innovative Methods, Models, and Technologies, Part 7 Digital Transformation of Education and Economics in Smart University, and Part 8 Smart Education for Children with Special Educational Needs. We believe this book will serve as a useful source of research data and valuable information for faculty, scholars, Ph.D. students, administrators, and practitioners who are interested in smart education, smart e-learning, and smart pedagogy.

**Approximate Number System and Mathematics** Jingguang Li, Xinlin Zhou, Marcus Lindskog, 2019-11-25. Humans process quantity information without the aid of language or symbols to guide a variety of everyday life decisions. The cognitive system that supports this intuitive skill is often referred to as the approximate number system (ANS). It has been argued that the ANS serves as the foundation of the formal symbolic number system in mathematics. Abundant empirical evidence is supportive of this view: acuity of the ANS is positively correlated with symbolic math performance; training of the ANS may cause improvements in symbolic math performance; and the ANS and symbolic number processing may share a common neural underpinning. However, recently several theories and empirical data cast doubt on the role of the ANS in symbolic math processing. This e-book aims to advance our understanding of the underlying mechanisms of the overlap between the ANS and mathematics.

**Media Exposure During Infancy and Early Childhood** Rachel Barr, Deborah Nichols Linebarger, 2016-11-24. This book discusses the burgeoning world of young children's exposure to educational media and its myriad implications for research, theory, practice, and policy. Experts across academic disciplines and the media fill knowledge gaps and address concerns regarding apps, eBooks, and other screen-based technologies which are being used by younger and younger children, and content delivery and design. Current research shows the developmental nuances of the child as learner in home, school, and mobile contexts, and the changes as parenting and pedagogy accommodate the complexities of the new interactive world. The book also covers methods for evaluating the quality of new media and prosocial digital innovations such as video support for

separated families and specialized apps for at risk toddlers Highlights of the coverage The role of content and context on learning and development from mobile media Learning from TV and touchscreens during early childhood Educational preschool programming How producers craft engaging characters to drive content delivery The parental media mediation context of young children s media use Supporting children to find their own agency in learning Media Exposure During Infancy and Early Childhood is an essential resource for researchers clinicians and related professionals and graduate students in diverse fields including infancy and early childhood development child and school psychology social work pediatrics and educational psychology

School Achievement and Failure in Portuguese and Spanish Speaking Countries Edgar Galindo,Adelinda A. Candeias,Heldemerina S. Pires,Miguel Ángel Carbonero,2018-08-31 This book is devoted to an increasingly important educational problem in the modern societies school achievement and failure School failure is presently a problem in developed as well as in developing countries In the Spanish and Portuguese speaking countries in Europe and Latin America school achievement and failure is consequently an important topic of political social and scientific discussion The following papers revise the latest research in the field from the perspective of Psychology

**Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives** Sarit Ashkenazi,Orly Rubinsten,Bert De Smedt,2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left

hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involved in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and atypical development Cognitive factors that play a role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and their transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
