Wu, 2012-12-06 A technological book is written and published for one of two reasons it either renders some other book in the same field obsolete or breaks new ground in the sense that a gap is filled The present book aims to do the latter On my return from industry to an academic career I started writing this book because I had seen that a gap existed Although a great deal of information appeared in the published literature about various technical aspects of advanced manufacturing technology AMT surprisingly little had been written about the systems context within which the sophisticated hardware and software of AMT

are utilized to increase efficiency Therefore I have attempted in this book to show how structured approaches in the design and evaluation of modern manufacturing plant may be adopted with the objective of improving the performance of the factory as a whole I hope this book will be a contribution to the newly recognized multidisciplinary engineering function known as manufacturing systems engineering The text has been designed specifically to demonstrate the systems aspects of modern manufacturing operations including systems concepts of manufacturing operation manufacturing systems modelling and evaluation and the structured design of manufacturing systems One of the major difficulties associated with writing a text of this nature stems from the diversity of the topics involved I have attempted to solve this problem by adopting an overall framework into which the relevant topics are fitted

System Dynamics Ernest Doebelin, 1998-02-10 Addressing topics from system elements and simple first and second order systems to complex lumped and distributed parameter models of practical machines and processes this work details the utility of systems dynamics for the analysis and design of mechanical fluid thermal and mixed engineering systems It emphasizes digital simulation and integrates frequency response methods throughout College or university bookshops may order five or more copies at a special student price available on request

Model Validation for Power System Frequency Analysis Hossein Seifi, Hamed Delkhosh, 2018-10-16 This book examines the role of model validation of power system planning and operation to optimize its performance in terms of frequency control It presents the detailed model validation for the Iranian Power Grid system where the frequency performance was analysed and improved using existing and new standard models to identify the influencing parameters Although the model validation was employed for a specific practical large scale system the framework concepts methods and formulations can be used for by any type of power system As such this book describing a generalized framework for model validation with a real case study is useful for both power industry experts and academia

Real-Time Integration Methods for Mechanical System Simulation Edward J. Haug, Roderic C. Deyo, 2013-06-29 This book contains the edited versions of lectures and selected contributed papers presented at the NATO Advanced Research Workshop on Real Time Integration Methods For Mechanical System Simulation held in Snowbird Utah August 7 11 1989 The Institute was attended by 42 participants from 9 countries including leading mathematicians and engineers from universities research institutions and industry The majority of participants presented either invited or contributed papers during the Institute and everyone participated in lively discussions on scientific aspects of the program The Workshop provided a forum for investigation of promising new directions for solution of differential algebraic equations DAE of mechanical system dynamics by mathematicians and engineers from numerous schools of thought The Workshop addressed needs and opportunities for new methods of solving of DAE of mechanical system dynamics from the perspective of a broad range of engineering and scientific applications Among the most exciting new applications addressed was real time computer simulation of mechanical systems that for the first time in human history permits operator in the loop simulation of equipment that is controlled by the

human e.g. driving a vehicle, operating a space telerobot, operating a remote manipulator and operating construction equipment. The enormous potential value of this new application and the fact that real time numerical integration methods for DAE of mechanical system dynamics is the pacing problem to be solved in realizing this potential served to focus much of the discussion at the Workshop.
