 Transportation Design Operation and Regulation Too often transportation systems fail the very people they are meant to
 serve Although engineers and policymakers design systems based on industry standards real world users drivers cyclists and
 pedestrians face hazards that are often overlooked From poorly maintained winter roads to a misalignment in expected
 versus actual usage due to human factors these oversights put lives at risk Forensic transportation engineer Robert Gilchrist
 evaluates conventional thinking in transportation engineering through a human lens By discussing the disconnect between
 industry standards and real world conditions he encourages a user centric approach one that considers human factors
 environmental challenges and the true cost of system failures Through case studies regulation analysis and expert insights he
 challenges current practice and supports an adjustment of baseline thinking to improve safety and decision making With
 decades of experience investigating transportation failures Gilchrist provides a compelling accessible guide for engineers
 policymakers lawyers and system users alike to inspire safer smarter transportation systems
