

Geometric Probability Spring 2021 Key

Appoint a reader: _____. Find the probability of hitting the shaded area or length of the target with a randomly-thrown dart that hits the target. The formula is $\text{Geometric Probability} = \frac{\text{shaded area}}{\text{total area}}$ or $\frac{\text{shaded length}}{\text{total length}}$. One helper

formula: $\text{shaded area} + \text{unshaded area} = \text{total area}$, which comes in handy sometimes, since it may be easier to calculate a shaded area than an unshaded area. For full credit, you MUST SHOW the formulas and calculations of all parts.

1. Rectangles in a rectangle

Total area = 90

Shaded area = $8 + 18 = 26$

Unshaded area = $90 - 26 = 64$

Geometric Probability = $\frac{26}{90} = \frac{13}{45}$

2. Rectangle

Total area = 16 triangles

Shaded area = 7 triangles

Unshaded area = 9 triangles

Geometric Probability = $\frac{7}{16}$

3. Right triangle in a rectangle

Total area = $16 \cdot 20 = 320$

Shaded area = $\frac{6 \cdot 8}{2} = 24$

Unshaded area = $320 - 24 = 296$

Geometric Probability = $\frac{24}{320} = \frac{3}{40}$

4. Circle inscribed in a square

Total area = $12^2 = 144\text{m}^2$

Shaded area = $\pi(6)^2 = 36\pi \text{ m}^2$

Unshaded area = $(144 - 36\pi)\text{m}^2$

Geometric Probability = $\frac{36\pi}{144} = \frac{\pi}{4} \approx 0.785$

5. Circle divided into 8 congruent sectors

Total area = 8 sectors

Shaded area = 3 sectors

Unshaded area = 5 sectors

Geometric Probability = $\frac{3}{8}$

6. Four circles inscribed inside a square. Hint: use the helper formula for this one: which is easiest to calculate: the shaded area, or the unshaded area?

Radius of one circle = $24\text{cm} \div 4 = 6\text{cm}$
(It is NOT 12 cm!)

Total area = $(24\text{cm})^2 = 576\text{cm}^2$

Shaded area = $(576 - 3\pi \cdot 6^2)\text{cm}^2 = (576 - 108\pi)\text{cm}^2$

Unshaded area = $(3\pi \cdot 6^2)\text{cm}^2 = 108\pi\text{cm}^2$

Geometric Probability = $\frac{(576 - 108\pi)\text{cm}^2}{576\text{cm}^2} = \frac{36(16 - 3\pi)}{36(16)} = \frac{16 - 3\pi}{16}$

$\frac{16 - 3\pi}{16} \approx 0.411$

A Five-Year Study of the First Edition of the Core-Plus Mathematics Curriculum Harold Schoen, Steven W. Ziebarth, Christian R. Hirsch, Allison BrckaLorenz, 2010-07-01 The study reported in this volume adds to the growing body of evaluation studies that focus on the use of NSF funded Standards based high school mathematics curricula Most previous evaluations have studied the impact of field test versions of a curriculum Since these innovative curricula were so new at the time of many of these studies students and teachers were relative novices in their use These earlier studies were mainly one year or less in duration Students in the comparison groups were typically from schools in which some classes used a Standards based curriculum and other classes used a conventional curriculum rather than using the Standards based curriculum with all

students as curriculum developers intended The volume reports one of the first studies of the efficacy of Standards based mathematics curricula with all of the following characteristics The study focused on fairly stable implementations of a first edition Standards based high school mathematics curriculum that was used by all students in each of three schools It involved students who experienced up to seven years of Standards based mathematics curricula and instruction in middle school and high school It monitored students mathematical achievement beliefs and attitudes for four years of high school and one year after graduation Prior to the study many of the teachers had one or more years of experience teaching the Standards based curriculum and or professional development focusing on how to implement the curriculum well In the study variations in levels of implementation of the curriculum are described and related to student outcomes and teacher behavior variables Item data and all unpublished testing instruments from this study are available at www.wmich.edu/cmp for use as a baseline of instruments and data for future curriculum evaluators or Core Plus Mathematics users who may wish to compare results of new groups of students to those in the present study on common tests or surveys Taken together this volume the supplement at the CPMP Web site and the first edition Core Plus Mathematics curriculum materials samples of which are also available at the Web site serve as a fairly complete description of the nature and impact of an exemplar of first edition NSF funded Standards based high school mathematics curricula as it existed and was implemented with all students in three schools around the turn of the 21st century

Fundamentals of Queuing Systems Nick T.

Thomopoulos, 2012-03-27 Waiting in lines is a staple of everyday human life Without really noticing we are doing it when we go to buy a ticket at a movie theater stop at a bank to make an account withdrawal or proceed to checkout a purchase from one of our favorite department stores Oftentimes waiting lines are due to overcrowded overfilling or congestion any time there is more customer demand for a service than can be provided a waiting line forms Queuing systems is a term used to describe the methods and techniques most ideal for measuring the probability and statistics of a wide variety of waiting line models This book provides an introduction to basic queuing systems such as M M 1 and its variants as well as newer concepts like systems with priorities networks of queues and general service policies Numerical examples are presented to guide readers into thinking about practical real world applications and students and researchers will be able to apply the methods learned to designing queuing systems that extend beyond the classroom Very little has been published in the area of queuing systems and this volume will appeal to graduate level students researchers and practitioners in the areas of management science applied mathematics engineering computer science and statistics
