### Module 26

#### How do we learn?

- Learning: the process of acquiring new and relatively enduring information or behaviors
  - My learning we are able to adapt to our environment
- John Mark and David Hume agreed with our Sonos conclusion that we learn by association
  - The mind connects events that occurs in sequence
  - Smell fresh brew, tastes good, next time, you expect it to taste good
- Habituate: an organism's decreasing response to a stimulus with repeated exposure to it
- Associative learning: learning that certain events occur together. The events maybe two stimuli as in classical conditioning or a response and its consequences as in operant conditioning
  - Classical conditioning: we learn to associate two stimuli and thus to anticipate events
    - Stimulus: any event or situation that evokes a response
      - Example is thunder and lightning
  - Operant conditioning: associate a response (our behavior) and its consequence.
    - Thus we and other animals learn to repeat acts followed by good results and avoid acts followed by bad results.
- Cognitive learning: we acquire mental information that guides our behavior
  - Observational learning: one form of cognitive learning that lets us heard from others experiences
    - Example is chimpanzees and how they watch each other

#### Classical conditioning

- Ivan Pavlov
- Classical conditioning: a type of learning in which one learns to link two or more stimuli and anticipate events
- Pavlov laid the foundation for John B Watson's ideas
