Introduction to Genetics and DNA

Genetics:- The branch of biology dealing with **hereditary** and the variation of inherited characteristics. It also involves examining the processes of hereditary through the transfer of genetic material from one parent to offspring. Genetic material is passed in the form of **Deoxyribonucleic Acid (DNA)** which is packaged in the form of **chromosomes**.

- **Genetic Material** is a term used to describe all the material inside the organism that stores genetic information.

Chromosome:- They are long thread-like strand, composed mostly of DNA. Chromosomes are usually found in the nucleus of all eukaryotic cells, but they vary widely between organisms of different species in their number, shape and size.

- The DNA is wrapped and coiled around proteins known as **histones**. Each wrap is called a **nucleosome**.
- Within the nucleus, the chromosomes form a mass of thread-like structures known as chromatin.
- Humans have 46 chromosomes, which makes 2 sets of 23. One set from the paternal side and one set from the maternal side
- **Somatic cells (general body cells)** are diploid and contain 46 chromosomes (one set). **Gametes (sex cells)** are haploid and contain 23 sets of chromosomes (one set)
- A **Karyotype** is a visual display of condensed chromosomes during mitosis which have been arranged in pairs according to chromosome number.
- Due to the consistent appearance of stained chromosomes, large abnormalities can be seen through a karyotype of an individual's chromosomes.

Deoxyribonucleic Acid (DNA):-

- **DNA or Deoxyribonucleic Acid** is a molecule/part of chromosomes they at carries genetic information in the nucleus which is necessary for cell structures and functions.

Railway Master Mechanic ,1904 *Resources in Education* ,1985 Particle Swarm Optimization Alex Lazinica, 2009-01-01 Particle swarm optimization PSO is a population based stochastic optimization technique influenced by the social behavior of bird flocking or fish schooling PSO shares many similarities with evolutionary computation techniques such as Genetic Algorithms GA The system is initialized with a population of random solutions and searches for optima by updating generations However unlike GA PSO has no evolution operators such as crossover and mutation In PSO the potential solutions called particles fly through the problem space by following the current optimum particles This book represents the contributions of the top researchers in this field and will serve as a valuable tool for professionals in this interdisciplinary field

Reconceiving the Gene Frederic Lawrence Holmes, 2008-10-01 This book relates how between 1954 and 1961 the biologist Seymour Benzer mapped the fine structure of the rII region of the genome of the bacterial virus known as phage T4 Benzer s accomplishments are widely recognized as a tipping point in mid twentieth century molecular biology when the nature of the gene was recast in molecular terms More often than any other individual he is considered to have led geneticists from the classical gene into the molecular age Drawing on Benzer s remarkably complete record of his experiments his correspondence and published sources this book reconstructs how the former physicist initiated his work in phage biology and achieved his landmark investigation The account of Benzer s creativity as a researcher is a fascinating story that also reveals intriguing aspects common to the scientific enterprise
