

Instructions for Operating Stover Type CT-2 Engines

Hit and Miss and Throttle Governing with Letters CT-2 on Name Plate

When engine is received, crating should be carefully removed to avoid damage to engine. Any tags attached to the engine should NOT be removed until engine has been in operation and the instructions on the tags thoroughly understood. When tags are finally removed they should be retained for future reference.

LOCATION OF ENGINE:

In locating the engine ample space should be provided around the engine to allow easy access to all parts. At least three feet should be allowed between the governor side of engine and building wall. The Pulley side, if located next to a wall, can be placed closer than three feet. When engine is installed in a building the exhaust should be piped outside, using a pipe that is as short as possible. Bends or elbows in the exhaust pipe are to be avoided wherever possible, as turns in pipe cause back pressure on engine and if exhaust pipe is longer than 15 feet the size of pipe should be increased. Care should be taken not to connect an exhaust pipe with a chimney or any opening which has been used for other purposes. A vertical exhaust pipe should be provided either with a cap or muffler to keep the rain out. It is sometimes necessary to provide a small drain in the lowest part of the exhaust pipe to drain out water which may collect and interfere with the operation of the engine. Since exhaust pipe may become red hot care should be taken not to place pipe near any wooden part of building.

PREPARATION FOR STARTING:

Fill crank case with oil. The correct oil level is indicated by the test cock located at the end or side of the crank case. Use only a good quality of medium motor oil.

Examine all moving parts, especially the governor, and see that parts do not stick from grease or paint. This grease or paint is applied to protect parts during shipping and a small amount of gasoline or benzine will aid its removal. All parts are adjusted before leaving factory and should be in first-class condition unless damaged in shipment. If instructions are carefully read, engine kept clean and all moving parts are kept in adjustment and well oiled, no trouble should be encountered in the operation of the engine.

Fill fuel tank.

Before the engine is started for the first time the cylinder head nuts should be tightened up alternately and after engine is warmed up the first time these nuts should again be tightened alternately, thus preventing the blowing out of the cylinder head gasket.

Fill hopper with water to within about three inches of the top. Engine can be more quickly turned on kerosene if only enough water to cover cylinder is used when starting. In extremely cold weather hot water will aid in starting, using only enough to cover the cylinder.

Oil all moving parts.
