Conceptualizing Processes of Strategic Change. The Contribution of an Attention-Based View to Strategy Formulation Florian Körner, 2015-07-06

Master s Thesis from the year 2015 in the subject Business economics Business Management Corporate Governance grade 1 7

University of Hannover Personal und Arbeit course International Management language English abstract

How and why do organizations change These questions have been an enduring and central quest of management scholars and many other disciplines To find answers concerning these questions it is indisputable that executives need to develop strategies in order to reach their goals and successfully respond and adapt to the environment while facing change Or as Ocasio 1997 put it explaining how firms behave is one of the fundamental issues or questions that define the field of strategy and the contribution it makes to the theory and practice of management When companies are faced with environmental or internal changes some organizations start changing their strategies and others do not Accordingly in this paper we will view strategic change as the firm s alignment with its external environment and with internal organizational issues Hence the starting point for why organizations take action concerns the environment within which the company operates Over the past decades managers and scholars assumed that the environment needed to be assessed observed and enacted in order to gain information process this information and to formulate a strategy to reach future goals and push the firm s overall performance The most popular assumptions within the strategy formulation literature are that the appropriateness of a firm s strategy can be defined in terms of its fit match or congruence with the environmental or organizational contingencies facing the firm Thus the environment inhibits global competitive pressure dynamics and uncertainty because of the current ongoing

internationalization of firms and their willingness and need to expand and invest in emergent markets in order to survive gain profits The ongoing revolution and upcoming research stream called Industry 4.0 which is highlighting the importance for and the influence of the internet e.g. the Internet of Things on firms is just one of the examples that shows how firms have to cope with and adapt to the complex environments Since for example the internet improves the information gathering process concerning environmental and internal organizational issues the actual scarce resource within the firm becomes the managers amount of attention that they allocate to searching for sorting through and interpreting the available information
