technique image processing software performs mathematical processing to box the outline of the apparent solar disc or sun blob within the captured image frame while sun localization is performed with an edge detection algorithm to determine the solar vector coordinates. An automated positioning system helps maximize the yields of solar power plants through solar tracking control to harness the sun's energy. In such renewable energy systems, the solar panel positioning system uses a sun tracking technique and a solar angle calculator in positioning PV panels in photovoltaic systems and concentrated photovoltaic CPV systems. Automatic on-axis solar tracking in a PV solar tracking system can be dual-axis sun tracking or single-axis sun solar tracking. It is known that a motorized positioning system in a photovoltaic panel tracker increases energy yield and ensures increased power output even in a single-axis solar tracking configuration. Other applications such as robotic solar tracker or robotic solar tracking system use robotics with artificial intelligence in the control optimization of energy yield in solar harvesting through a robotic tracking system. Automatic positioning systems in solar tracking designs are also used in other free energy generators such as concentrated solar thermal power CSP and dish Stirling systems. The sun tracking device in a solar collector in a solar concentrator or solar collector. Such a performs on-axis solar tracking. A dual-axis solar tracker assists to harness energy from the sun through an optical solar collector which can be a parabolic mirror, parabolic reflector, Fresnel lens, or mirror array matrix. A parabolic dish or reflector is dynamically steered using a transmission system or solar tracking slew drive mechanism. In steering the dish to face the sun, the power dish actuator and actuation means in a parabolic dish system optically focusses the sun's energy on the focal point of a parabolic dish or solar concentrating means. A Stirling engine, solar heat pipe, thermosyphon, solar phase change material PCM receiver, or a fibre optic sunlight receiver means is located at the focal point of the solar concentrator. The dish Stirling engine configuration is referred to as a dish Stirling system or Stirling power generation system. Hybrid solar power systems used in combination with biogas, biofuel, petrol, ethanol, diesel, natural gas, or PNG use a combination of power sources to harness and store solar energy in a storage medium. Any multitude of energy sources can be combined through the use of controllers and the energy stored in batteries, phase change material, thermal heat storage, and in cogeneration form converted to the required power using thermodynamic cycles: organic Rankine, Brayton cycle, micro turbine, Stirling with an inverter and charge controller. Book and literature review is ideal for sun and moon tracking in solar applications for sun-rich countries such as the USA, Spain, Portugal, Mediterranean, Italy, Greece, Mexico, Portugal, China, India, Brazil, Chile, Argentina, South America, etc. PC Solar Tracking Tracking Systems Solar Tracker Systems Tracker *EPA Publications Bibliography* United States. Public Sector Property Asset Management Malawi Ngwira, David Manase, 2016-03-22 In many public sector organisations there has been little or no adoption of a proactive asset management strategy Where an extensive property portfolio exists this can result in poor overall utilisation of the portfolio exemplified by excessive vacant property or properties not being put to best use In such situations there is a risk that the building stock deteriorates more rapidly than expected leading to expensive maintenance and repair charges Lack of a proactive asset management strategy will impact on the services delivered by such organisations Public Sector Property Asset Management covers all aspects of asset management in the public sector including the overall concept the development of asset management strategies and the implementation of asset management practices It evaluates asset management strategies processes and practices to show how effective management of property assets support business activities or service delivery functions The reader will understand the importance of improving decision making through the recognition of all costs of owning and operating those

assets throughout their lifecycle leading to improved business process activities or service delivery functions which greatly assist in meeting the social and economic objectives of such organisations Written for all practitioners currently involved in asset management the book will also be useful in the university environment to those teaching researching or learning about asset management in the public sector
