Management is an essential resource for postgraduate level students on Logistics and Supply Chain Management degrees and is also for students taking postgraduate Logistic Management modules Online resources include lecturer slides an instructor s manual and additional comments to the reflective exercises *Logistics Systems: Design and Optimization* Andre Langevin,Diane Riopel,2005-03-25 In a context of global competition the optimization of logistics systems is inescapable Logistics Systems Design and Optimization falls within this perspective and presents twelve chapters that well illustrate the variety and the complexity of logistics activities Each chapter is written by recognized researchers who have been commissioned to survey a specific topic or emerging area of logistics The first chapter by Riopel Langevin and Campbell develops a framework for the entire book It classifies logistics decisions and highlights the relevant linkages to logistics decisions The intricacy of these linkages demonstrates how thoroughly the decisions are interrelated and underscores the complexity of managing logistics activities Each of the chapters focus on quantitative methods for the design and optimization of logistics systems *Global Logistics Management* Craig Voortman,2004 An understanding of logistics is of primary importance in the modern business world and this text allows students and businesspeople alike to become comfortable with the fundamentals of this discipline In its explanation of logistics the process of moving a commodity or service from customer order to consumption this guide provides insight into every step of the process from order processing and purchasing to packaging and warehousing Tips are included for integrated logistics customer service materials flow and strategic logistics plans *Comprehensive Logistics* Timm Gudehus,Herbert Kotzab,2010-06-09 Modern logistics comprises operative logistics analytical logistics and management of performance networks Central task of operative logistics is the efficient supply of required goods at the right place in the right order at the right time Tasks of analytical logistics are to design optimal supply networks and logistic systems to develop strategies for planning scheduling and operation and to organize efficient order and performance processes Logistic management has to plan implement and operate performance networks and to schedule the orders resources and inventories This reference book offers a unique survey of modern logistics It contains methods rules and tools for the solution of a broad variety of problems The algorithms and formulas can be used for the computer based planning of logistic systems and for the dynamic scheduling of orders and resources in supply networks The analytically derived rules and strategies enable considerable improvements of performance quality and costs Their practical application is demonstrated by several examples from industry trade and logistic service providers An extensive index makes the book a dictionary of modern logistics The book is written for managers planners and consultants for economists and engineers for theorists and practitioners for scientists students and others who are interested in logistics and performance networks Distribution David Frederick Ross,1995-11-30 It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events It is not that the facts of history have changed No one will dispute that

the battle of Waterloo occurred on June 11 1815 or that the allied invasion of Europe began on June 6 1944 What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation By examining the facts of history from a new perspective today's historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today's organizational cultural and economic realities Hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities

Sustainable Reverse Logistics Network Daoud Aït-Kadi, Marc Chouinard, Suzanne Marcotte, Diane Riopel, 2012-12-13

Traditional logistical chains have enabled us to respond efficiently to the needs of customers in terms of services and products. However, the returns rejected and by products of these activities have been eliminated or ignored. Reverse logistics aims at valuing these products using a value creation network integrating recovery, processing, recycling, distribution or clean removal processes. In the context of sustainable development integrating economic, social and environmental factors, these activities raise questions concerning the design of products, processes and logistic networks. Taking these considerations into account involves significant changes that affect business models as well as consumer habits. New working methods and a long term vision are the new bases for sustainable logistic networks. The objective of this book is to supply an educational tool for engineering schools as well as a management tool for the efficient implementation of the reverse logistics function. It brings together the knowledge acquired by the scientific community. Even if reverse logistics has been the subject of several books over the past few years, very few theories have been developed and the subject is far from being exhausted. This book proposes generic concepts and processes that can be adapted to all businesses producing goods and services and which aim to integrate reverse logistics. These processes will enable us to shed light on their complexity and to take into account all the important variables.
