Abstract: We evaluated the execution of the operational programs (OPs) committed to encouraging the adoption of information and communication technologies (ICTs) in small and medium-sized enterprises (SMEs). To achieve this goal, we employed a novel three-stage weighted Russell directional distance (WRDD) data envelopment analysis (DEA) model in conjunction with stochastic frontier analysis (SFA), which considers indicators officially mandated by the European Union (EU) and environmental factors, to evaluate 51 OPs from 16 EU countries. All in all, we concluded that by removing the environmental factors, about 30% of the OPs (16) reached an efficient procedural performance against 20% (10). The OP more frequently viewed as a benchmark, regardless of the environmental factors is “Multi-regional Spain—ERDF” that remains robustly efficient within 5% and 10% tolerances. Without the removal of the environmental factors, the “number of operations supported” is the indicator that requires more attention from management authorities (MAs), whereas with their removal one-third of the OPs need to further reduce the “eligible costs decided” and improve “eligible spending”. According to our findings, more developed regions and a higher rate of ICT specialists seem to be related to an underuse of ERDF funds dedicated to boosting ICT in SMEs. These findings might be related to the administrative burden and the lack of ability of SMEs to deal with the various procedures for applying for and implementing European Regional Development Fund (ERDF) projects. Overall, it is critical to provide further support that simplifies administrative procedures and addresses SMEs’ specific requirements.

1. Introduction

In a time of digital transformation, global markets, and pandemics, businesses must increase their internal skills to deal with dynamic environments [1]. Innovative ICTs such as the Internet of Things, mobile devices, big data, and machine learning have a proven impact on organizations’ operating contexts, radically altering the business practices of many firms as well as how customers engage with these businesses and other players [2–4]. ICT tools are usually used to gather, save, manage, disseminate, and spread information, bringing together both physical devices (such as computers, networks, and terminals) and the software or applications which allow running them [5].

Applied Welfare Economics Massimo Florio, Chiara Pancotti, 2022-08-30. Applied Welfare Economics Cost Benefit Analysis for Project and Policy Evaluation presents a consistent framework for applied welfare economics and is grounded in a comprehensive theory of cost benefit analysis specifically focused on offering a practical approach to policy and project evaluation. After opening with a theoretical discussion of the concept of social welfare, a critical analysis of the traditional doctrine of welfare economics embodied in the Two Fundamental Theorems, and a presentation of social cost benefit analysis, the book introduces readers to an applied framework. This includes the empirical estimation of shadow prices of goods, the social cost of labour and capital, and the assessment of risk. The book also examines real life experiences with cost benefit analysis including ex post evaluation of major projects, economic rates of return in different sectors, and a case study on privatisation. These chapters draw on first hand research gained by the author team from years of advisory work for the European Commission and other international and national institutions. This second edition presents updated data, more international examples, and more coverage of topics such as very long run discounting effects and climate change as an intergenerational effect. It also includes more practical examples and end of chapter questions to aid student's learning. Applied Welfare Economics is a valuable textbook for upper level courses on welfare economics, cost benefit analysis, public policy analysis, and related areas.
