This book is intended for classroom teaching in architectural and civil engineering at the graduate and undergraduate levels Although it has been developed from lecture notes given in structural steel design it can be useful to practicing engineers Many of the examples presented in this book are drawn from the field of design of structures Design of Steel Structures can be used for one or two semesters of three hours each on the undergraduate level For a two semester curriculum Chapters 1 through 8 can be used during the first semester Heavy emphasis should be placed on Chapters 1 through 5 giving the student a brief exposure to the consideration of wind and earthquakes in the design of buildings With the new federal requirements vis a vis wind and earthquake hazards it is beneficial to the student to have some understanding of the underlying concepts in this field In addition to the class lectures the instructor should require the student to submit a term project that includes the complete structural design of a multi story building using standard design procedures as specified by AISC Specifications Thus the use of the AISC Steel Construction Manual is a must in teaching this course In the second semester Chapters 9 through 13 should be covered At the undergraduate level Chapters 11 through 13 should be used on a limited basis leaving the student more time to concentrate on composite construction and built up girders **Applied**

The code requirements are illustrated with 170 design examples including concise step by step solutions. Coverage includes Steel buildings and design criteria, Design loads, Behavior of steel structures under design loads, Design of steel structures under design loads, Design of steel beams in flexure, Design of steel beams for shear and torsion, Design of compression members, Stability of frames, Design by inelastic analysis, Design of tension members, Design of bolted and welded connections, Plate girders, Composite construction.

Design of Steel Structures John E. Englekirk, 1994-10-03 *Design in Structural Steel* John E. Lothers, 1953 *Steel Structures* Charles G. Salmon, John Edwin Johnson, 1996. Appropriate for civil engineering courses in structural steel design, the fourth edition of this classic text provides background for designing steel structural elements using the 1993 AISC Load and Resistance Factor Design LRFD and the 1989 AISC Allowable Stress Design ASD Specifications. As in previous successful editions, a logical sequence of topics is featured making complex material easy to understand. Emphasis throughout is placed on the explanation of the LRFD approach involving limit states and factored loads. To provide secondary coverage for the major topics such as tension members, axially loaded columns, beams, beam columns and composite construction, the ASD formulations are developed from the strength related concepts of LRFD. Throughout the book, all concepts are illustrated by numerical examples using LRFD for the most important concepts; examples using ASD are also included. Many new end of chapter problems and references round out the text's presentation. Learning Aids: Large Quantity of Numerical Examples, Problems on Design Procedures, Chapter Introductions, Supplements For the Instructor.
