Fluency Doesn't Just Happen in Multiplication and Division Nicki Newton, Ann Elise Record, Alison J. Mello, 2024-06-20
Fluency in math doesn't just happen; it is a well-planned journey. In this book, you'll find practical strategies and activities for teaching your elementary students basic multiplication and division. The authors lay out the basic framework for building math fluency using a cycle of engagement, concrete, pictorial, abstract, and provide a multitude of examples illustrating the strategies in action. You'll learn how to help students to model their thinking with a variety of tools, keep students engaged through games, poems, songs, and technology, assess student development to facilitate active and continuous learning, implement distributed practices throughout the year, and boost parental involvement so that students remain encouraged even as material becomes more complex. A final chapter devoted to action plans will help you put these strategies into practice in your classroom right away. Most importantly, you'll open the door to deep and lasting math fluency.

Classroom-Ready Rich Math Tasks, Grades 2-3 Beth McCord Kobett, Francis (Skip) Fennell, Karen S. Karp, Desiree Harrison, Barbara Ann Swartz, 2021-06-08
Detailed plans for helping elementary students experience deep mathematical learning. Do you work tirelessly to make your math lessons meaningful, challenging, accessible, and engaging? Do you spend hours you don't have searching for adapting and creating tasks to provide rich experiences for your students that supplement your mathematics curriculum? Help has arrived. *Classroom-Ready Rich Math Tasks for Grades 2-3* details research and standards-aligned, high-cognitive-demand tasks that will have your students doing deep, problem-based learning. These ready-to-implement, engaging tasks connect skills, concepts, and practices while encouraging students to reason, problem-solve, discuss, explore, multiple solution pathways, connect multiple representations, and justify their thinking. They help students monitor their own thinking and connect the mathematics they know to new situations. In other words, these tasks allow students to truly do mathematics. Written with a strengths-based lens and an attentiveness to all students, this guide includes complete task-based lessons, referencing mathematics standards and practices, vocabulary, and materials. Downloadable planning tools, student resource pages, and thoughtful questions and formative assessment prompts. Guidance on preparing, launching, facilitating, and reflecting on each task. Notes on access and equity, focusing on students' strengths, productive struggle, and distance or alternative learning environments. With concluding guidance on adapting or creating additional rich tasks for your students, this guide will help you give all of your students the deepest, most enriching and engaging mathematics learning experience possible.

Thinking Practices in Mathematics and Science Learning James G. Greeno, Shelley V. Goldman, 2013-04-03
The term used in the title of this volume, thinking practices, evokes questions that the authors of the chapters within it begin to answer: What are thinking practices? What would schools and other learning settings look like if they were organized for the learning of thinking practices? Are thinking practices general, or do they differ by disciplines? If there are differences, what implications do those differences have for how we organize teaching and learning? How do perspectives on learning, cognition, and culture affect the kinds of learning experiences children and adults have? This

volume describes advances that have been made toward answering these questions These advances involve several agendas including increasing interdisciplinary communication and collaboration reconciling research on cognition with research on teaching learning and school culture and strengthening the connections between research and school practice The term thinking practices is symbolic of a combination of theoretical perspectives that have contributed to the volume editors understanding of how people learn how they organize their thinking inside and across disciplines and how school learning might be better organized By touring through some of the perspectives on thinking and learning that have evolved into school learning designs Greeno and Goldman begin to establish a frame for what they are calling thinking practices This volume is a significant contribution to a topic that they believe will continue to emerge as a coherent body of scientific and educational research and practice
