making them ideal as important species for studying functional genes for the unique characteristics of forest tree species. Fast growing forest plantations are sustainable feedstocks of plant biomass that can serve as substitutes for fossil carbon resources for materials, chemicals, and energy. The first annotated whole genome sequence of the model woody plant *Populus trichocarpa* was published in 2006. Since then, many forest tree species have been sequenced and annotated, which has facilitated the development of functional genomics, GWAS, genetic tools, and new biotechnologies in tree research. Targeted functional genomics allows us to identify genes that affect traits of interest such as agronomic and economic traits, wood properties, and biotic stress resistance. Molecular biology-based biotechnologies allow us to manipulate these genes and traits. The breakthroughs in biotechnology approaches together with accelerated genomic breeding will be crucial for the functional revealing of important genes for key traits and the development of a new generation of woody crops, helping us to keep up with the growing demand for wood fiber and other bioproducts from forest trees. This Research Topic aims to explore the molecular mechanisms of key biological processes in model and non-model forest tree species with a combination of approaches of genetics, omics, and chemistry. Also, new technologies and resources used for forest tree species research are of equal importance to basic science. We encourage fundamental research in the field of forest tree genomics, genetic studies in revealing the genes and pathways associated with key agronomic and economic traits in forest trees, molecular mechanisms of secondary growth regulation in tree species, and the potential utilization of biotechnologies in genetic improvement of woody crops. We welcome all types of submissions, including original research, reviews, methodologies, mini reviews, perspectives, and opinion articles in this field, including but not limited to research covering genetic and functional characterization of genes regulating perennial tree secondary growth, genetic improvement in woody tree crops using gene editing and other modern biotechnologies, discovery, characterization, and application of germplasm resources with agronomic and economic traits. [Bacterial Pathogens and Virulence Factor Genes: Diversity and Evolution](#) Renmao "Tim" Tian, Qun Gao, Xuanyu Tao, Xiangyu Fan, 2025-08-29. The landscape of infectious diseases is continuously reshaped by the emergence and evolution of bacterial pathogens. Understanding the diversity and evolution of bacterial pathogens and their virulence factors is critical in combating infectious diseases. Recent developments in genomics and molecular biology have shed light on the complex mechanisms of bacterial pathogenesis and the evolutionary arms race between pathogens and hosts. This Research Topic aims to explore the intricate relationships between bacterial pathogens, their virulence factors, and the host, providing a comprehensive understanding of the underlying genetic and evolutionary dynamics. It is imperative to investigate these aspects to develop innovative strategies for disease control and prevention. This Research Topic addresses the urgent need to decipher the diversity and evolutionary patterns of bacterial pathogens and their virulence factors. We aim to gather insights into the molecular mechanisms driving pathogenicity and resistance to current therapeutic approaches. By understanding

these factors we can develop more effective diagnostic tools vaccines and antimicrobial strategies The goal is to bridge gaps in our current knowledge by leveraging recent advances in genomic sequencing bioinformatics and molecular biology Contributions will focus on elucidating the genetic diversity of bacterial pathogens the evolutionary pathways of virulence factors and their implications in disease manifestation and treatment This research is crucial in a world where antibiotic resistance is a growing concern and novel pathogens are constantly emerging By fostering a deeper understanding of bacterial pathogenesis we aim to contribute to the global effort in infectious disease control and public health improvement
