Due to precision flexibility simplicity in construction easy control higher speed and lower energy consumptions servo presses have recently become popular in metal forming applications Servo press technology combines the advantages of hydraulic and conventional mechanical presses without their drawbacks This study presents design construction and demonstration of a servo crank press system for metal forming operations The research involves kinematics and motion optimization dynamic modeling structural design and analysis servo motor selection automation and control and operational performances of the servo press The press used in this work has a load capacity of 50 ton and stroke capacity of 200 mm Firstly optimized trajectories of ram scenarios are generated Then dynamic modeling using Lagrange approach is presented Next structural model is constructed and Finite Element Analysis FEA of press parts

are performed within safety limits A servo motor with a reduction unit is selected based on dynamic model After that a new automation system is developed and Cascade Feed Forward CasFF control is applied Moreover four motion scenarios crank dwell link and soft motion are employed for the performance assessment of press Finally the dynamic model is verified by the experimental results The research study is carried out under support and grant of an industrial project aiming to provide know how to industry and researchers Key Words Servo crank press metal forming motion design dynamic modeling system control

Track/Train Dynamics and Design Gerald J. Moyer, Walter D. Pilkey, Barbara F. Pilkey, 2013-10-22 Track Train Dynamics and Design Advanced Techniques reviews the progress that has been made in the development and applications of advanced analytical techniques for improving the dynamic stability safety and reliability of current generation rail freight vehicle components and track structures Topics covered range from structural mechanics and stress analysis methods to and material science techniques for the prediction of fracture and wear in railroad applications The nature of technology transfer from other application areas notably aerospace is considered along with the unique nature of some railroad problems This book is comprised of 26 chapters and opens with an overview of Phase II of the Cooperative Track Train Dynamics Program including its main goals tasks and progress The reader is then introduced to the state Of the art of rail analytical techniques and cost benefit issues associated with railways and railroad transportation The following chapters explore body centerplate fatigue cracking mathematical models for track train dynamics wheel and rail wear during freight car curving and application of advanced stress analysis techniques in the design of freight car components The application of finite element analysis to the study of railroad wheel failure phenomena is also outlined This monograph will be a useful resource for transportation and mechanical engineers especially those dealing with railroads
