Probability and Statistics Michael J. Evans, Jeffrey S. Rosenthal, 2004 Unlike traditional introductory math stat textbooks Probability and Statistics The Science of Uncertainty brings a modern flavor based on incorporating the computer to the course and an integrated approach to inference From the start the book integrates simulations into its theoretical coverage and emphasizes the use of computer powered computation throughout Math and science majors with just one year of calculus can use this text and experience a refreshing blend of applications and theory that goes beyond merely mastering the technicalities They'll get a thorough grounding in probability theory and go beyond that to the theory of statistical inference and its applications An integrated approach to inference is presented that includes the frequency approach as well as Bayesian methodology Bayesian inference is developed as a logical extension of likelihood methods A separate chapter is devoted to the important topic of model checking and this is applied in the context of the standard applied statistical techniques Examples of data analyses using real world data are presented throughout the text A final chapter introduces a number of the most important stochastic process models using elementary methods Note An appendix in the book contains Minitab code for more involved computations The code can be used by students as templates for their own calculations If a software package like Minitab is used with the course then no programming is required by the students

The SAGE Encyclopedia of Communication Research Methods Mike Allen, 2017-01-15 Communication research is evolving and changing in a world of online journals, open access, and new ways of obtaining data and conducting experiments via the Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A to Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods, whether quantitative, qualitative, or mixed, for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online, multi-media environments. Email, texting, cellphone, video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership, and security, privacy, and other aspects of conducting an ethical research program. Features 652 signed entries, contained in an authoritative work spanning four volumes, available in choice of electronic or print formats. Although organized A to Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate

directly related entries Back matter includes a Chronology of the development of the field of communication research a Resource Guide to classic books journals and associations a Glossary introducing the terminology of the field and a detailed Index Entries conclude with References Further Readings and Cross References to related entries to guide students further in their research journeys The Index Reader s Guide themes and Cross References combine to provide robust search and browse in the e version

Linear Regression David J. Olive,2017-04-18 This text covers both multiple linear regression and some experimental design models The text uses the response plot to visualize the model and to detect outliers does not assume that the error distribution has a known parametric distribution develops prediction intervals that work when the error distribution is unknown suggests bootstrap hypothesis tests that may be useful for inference after variable selection and develops prediction regions and large sample theory for the multivariate linear regression model that has m response variables A relationship between multivariate prediction regions and confidence regions provides a simple way to bootstrap confidence regions These confidence regions often provide a practical method for testing hypotheses There is also a chapter on generalized linear models and generalized additive models There are many R functions to produce response and residual plots to simulate prediction intervals and hypothesis tests to detect outliers and to choose response transformations for multiple linear regression or experimental design models This text is for graduates and undergraduates with a strong mathematical background The prerequisites for this text are linear algebra and a calculus based course in statistics

Statistics and Probability in High School Carmen Batanero,Manfred Borovcnik,2016-07-27 Statistics and probability are fascinating fields tightly interwoven with the context of the problems which have to be modelled The authors demonstrate how investigations and experiments provide promising teaching strategies to help high school students acquire statistical and probabilistic literacy In the first chapter the authors put into practice the following educational principles reflecting their views of how these subjects should be taught a focus on the most relevant ideas and postpone extensions to later stages illustrating the complementary dual nature of statistical and probabilistic reasoning utilising the potential of

technology and show its limits and reflecting on the different levels of formalisation to meet the wide variety of students previous knowledge abilities and learning types The remaining chapters deal with exploratory data analysis modelling information by probabilities exploring and modelling association and with sampling and inference Throughout the book a modelling view of the concepts guides the presentation In each chapter the development of a cluster of fundamental ideas is centred around a statistical study or a real world problem that leads to statistical questions requiring data in order to be answered The concepts developed are designed to lead to meaningful solutions rather than remain abstract entities For each cluster of ideas the authors review the relevant research on misconceptions and synthesise the results of research in order to support teaching of statistics and probability in high school What makes this book unique is its rich source of worked through tasks and its focus on the interrelations between teaching and empirical research on understanding statistics and probability
