(3) Disconnect distributor wiring harness from main engine harness.

(4) Remove cylinder number 1 spark plug.

(5) Hold a finger over open spark plug hole. Rotate engine at vibration damper hole until compression (pressure) is felt.

(6) Slowly continue to rotate engine. Do this until timing marks on vibration damper pulley align with top dead center (TDC) mark if displayed on timing degree scale (Fig. 10). Always rotate engine in direction of normal rotation. Do not rotate engine backward to align timing marks.

(8) Remove distributor hold-down bolt and clamp.

(9) Remove distributor from engine by slowly lifting straight up.

(10) Note that rotor will rotate slightly in a clockwise direction while lifting up distributor. The oil pump gear will also rotate slightly in a counterclockwise direction while lifting up distributor. This is due to the helical cut gears on distributor and camshaft.

(11) Note removed position of rotor during distributor removal. During installation, this will be referred to as the Pre position.

(12) Observe slot in oil pump gear through hole on side of engine. It should be slightly before twelve o'clock or 12 in clock position (Fig. 11).

(13) Remove and discard the old distributor to an approved point.

REMOVAL - 3 9/16-2 1/8 IN.

CAUTION: Base ignition timing is not adjustable on any engine. Distributors do not have built in carburetor or vacuum installed advance. Base ignition timing and timing advance are controlled by the Powertrain Control Module (PCM). Because a conventional timing light can not be used to adjust distributor position after installation, note position of distributor before removal.

- (1) Remove air cleaner assembly.
- (2) Disconnect negative cable from battery.
- (3) Remove distributor cap from distributor (see wiring).

(4) Mark the position of distributor housing in relationship to engine or dash panel. This is done to aid in installation.

(5) When distributor is removed, the camshaft vibration damper is brought to the Top Dead Center (TDC) timing position.

(6) Rotate a notch on the Crankshaft Vibration Damper pointing left.

(7) When removing distributor, or viewed from front, note position of camshaft vibration damper to assist in reference (TDC) mark on timing chain cover 0°-120°.

(8) The distributor rotor should now be aligned to the CYL. NO. 1 alignment mark displayed on the camshaft position sensor (Fig. 13). Next, rotate the camshaft through another complete 360 degree turn. Note the position of the number one cylinder spark plug rotor in the cap in relation to rotor. Rotor should now be aligned to this position.

(9) Disconnect camshaft position sensor wiring harness from main engine wiring harness.
