

The background of the cover is a cartoon illustration. At the top, a green car is sinking in turbulent blue and white waves. Several people are depicted in various states of falling or floating in the water. One person in a blue shirt is falling from the top left, another in a red shirt from the top right. In the middle right, a person in a blue polka-dot shirt is falling. A person in a brown shirt is also in the water. In the bottom left, a band of four people is performing on a sandy shore. One person is playing a guitar, another is on a drum set, and two others are singing or playing instruments. The sky is filled with grey, swirling clouds.

The Cartoon Introduction To Climate Change:

The Cartoon Introduction to Climate Change, Revised Edition Yoram Bauman, Grady Klein, 2022-06-14 When The Cartoon Introduction to Climate Change was first published in 2014 it offered something entirely new a fun illustrated guide to a planetary crisis If that sounds like an oxymoron you've never seen the carbon cycle demonstrated through yoga poses or a polar bear explaining evolution to her cubs That creativity comes from the minds of Yoram Bauman the world's first and only stand up economist and award winning illustrator Grady Klein After seeing their book used in classrooms and the halls of Congress alike the pair has teamed up again to fully update the guide with the latest scientific data from the IPCC Intergovernmental Panel on Climate Change A lot has happened to the climate over the last decade and the authors tackle the daunting statistics with their trademark humor They realize it's better to laugh than cry when confronting mind blowing facts about our changing world Readers will become familiar with critical concepts but they'll also smile as they learn about climate science projections and policy Sociologists have argued that we don't address climate change because it's too big and frightening to get our heads around The Cartoon Introduction to Climate Change takes the intimidation and gloom out of one of the most important challenges of our time

The Cartoon Introduction to Climate Change Yoram Bauman, Grady Klein, 2014-06-05 Climate change is no laughing matter but maybe it should be The topic is so critical that everyone from students to policy makers to voters needs a quick and easy guide to the basics The Cartoon Introduction to Climate Change entertains as it educates delivering a unique and enjoyable presentation of mind blowing facts and critical concepts Stand up economist Yoram Bauman and award winning illustrator Grady Klein have created the funniest overview of climate science predictions and policy that you'll ever read You'll giggle but you'll also learn about everything from Milankovitch cycles to carbon taxes If those subjects sound daunting consider that Bauman and Klein have already written two enormously successful cartoon guides to economics making this notoriously dismal science accessible to countless readers Bauman has a PhD in economics and has taught at both the high school and college level but he now makes a living performing at comedy clubs universities and conferences sharing the stage with personalities as diverse as Robin Williams and Paul Krugman The authors know how to get a laugh and they know their facts This cartoon introduction is based on the latest report from the authoritative Intergovernmental Panel on Climate Change IPCC and integrates Bauman's expertise on economics and policy If economics can be funny then climate science can be a riot Sociologists have argued that we don't address global warming because it's too big and frightening to get our heads around The Cartoon Introduction to Climate Change takes the intimidation and gloom out of one of the most complex and hotly debated challenges of our time References available at <http://standupeconomist.com/cartoon/climate>

Learner-Centered Teaching Activities for Environmental and Sustainability Studies Loren B. Byrne, 2016-03-21 Learner centered teaching is a pedagogical approach that emphasizes the roles of students as participants in and drivers of their own learning Learner centered teaching activities go beyond traditional lecturing by helping students construct their own understanding of information develop skills via hands on engagement and encourage personal reflection through metacognitive tasks In addition learner centered classroom approaches may challenge students preconceived notions and expand their thinking by confronting them with thought provoking statements tasks or scenarios that cause them to pay closer attention and cognitively see a topic from new perspectives Many types of pedagogy fall under the umbrella of learner centered teaching including laboratory work group discussions service and project based learning and student led research among others Unfortunately it is often not possible to use some of these valuable methods in all course situations given constraints of money space instructor expertise class meeting and instructor preparation time and the availability of prepared lesson plans and material Thus a major challenge for many instructors is how to integrate learner centered activities widely into their courses The broad goal of this volume is to help advance environmental education practices that help increase students environmental literacy Having a diverse collection of learner centered teaching activities is especially useful for helping students develop their environmental literacy because such approaches can help them connect more personally with the material thus increasing the chances for altering the affective and behavioral dimensions of their environmental literacy This volume differentiates itself from others by providing a unique and diverse collection of classroom activities that can help students develop their knowledge skills and personal views about many contemporary environmental and sustainability issues
