The Laser In America 1950 1970:

The Laser in America, 1950-1970 Joan Lisa Bromberg,1991 In this book Joan Lisa Bromberg brings a historian's broad perspective to bear on the formative years of laser research in the United States The History of the Laser Mario Bertolotti,2004-10-01 Since the invention of the first working laser in 1960 development of these devices has progressed at an unprecedented rate to the extent that the laser is now a common part of everyday life from the semiconductor laser used in CD players and telecommunication systems to the high power eximer lasers used in manufacturing processes This book tra

Einstein's Unfinished Symphony Marcia Bartusiak,2017-06-27 This updated edition of the New York Times Notable Book recounts the long hunt for Einstein's predicted gravitational waves and celebrates their discovery In February 2016 astronomers announced that they had verified the last remaining prediction of Einstein's general theory of relativity vibrations in space time called gravitational waves Humanity can now tune in to a cosmic orchestra We have heard the chirp of two black holes dancing toward a violent union We will hear the cymbal crashes from exploding stars the periodic drumbeats from swiftly rotating pulsars and maybe even the echoes from the Big Bang itself More than a decade earlier Marcia Bartusiak chronicled the gamble taken by astronomers who were determined to prove Einstein right In their quest to detect gravitational waves they built the Laser Interferometer Gravitational Wave Observatory LIGO detectors the most accurate measuring devices ever created In this updated edition Bartusiak brings the story to a thrilling close with the triumphant discovery of gravitational waves made with the LIGO An important multifaceted scientific story part theoretical physics part astronomy part experimental physics part engineering James Ryerson New York Times Book Review *Lonely Ideas* Loren Graham,2013-09-13 An expert investigates Russia's long history of technological invention followed by commercial failure and points to new opportunities to break the pattern When have you gone into an electronics store picked up a desirable gadget and found that it was labeled Made in Russia Probably never Russia despite its epic intellectual achievements in music literature art and pure science is a negligible presence in world technology Despite its current leaders' ambitions to create a knowledge economy Russia is economically dependent on gas and oil In *Lonely Ideas* Loren Graham investigates Russia's long history of technological invention followed by failure to commercialize and implement For three centuries Graham shows Russia has been adept at developing technical ideas but abysmal at benefiting from them From the seventeenth century arms industry through twentieth century Nobel awarded work in lasers Russia has failed to sustain its technological inventiveness Graham identifies a range of conditions that nurture technological innovation a society that values inventiveness and practicality an economic system that provides investment opportunities a legal system that protects intellectual property a political system that encourages innovation and success Graham finds Russia lacking on all counts He explains that Russia's failure to sustain technology and its recurrent attempts to force modernization reflect its political and social evolution and even its resistance to democratic principles But Graham points to new connections between Western

companies and Russian researchers new research institutions a national focus on nanotechnology and the establishment of Skolkovo a new technology city Today he argues Russia has the best chance in its history to break its pattern of technological failure

Restricted Data Alex Wellerstein, 2024-05-31 Groundbreaking Wellerstein peels back the layers of the nuclear onion to reveal a rich debate about what should be kept secret and why Nature The first full history of US nuclear secrecy from its origins in the late 1930s to our post Cold War present The American atomic bomb was born in secrecy From the moment scientists first conceived of its possibility to the bombings of Hiroshima and Nagasaki and beyond there were efforts to control the spread of nuclear information and the newly discovered scientific facts that made such powerful weapons possible The totalizing scientific secrecy that the atomic bomb appeared to demand was new unusual and very nearly unprecedented It was foreign to American science and American democracy and potentially incompatible with both From the beginning this secrecy was controversial and it was always contested The atomic bomb was not merely the application of science to war but the result of decades of investment in scientific education infrastructure and global collaboration If secrecy became the norm how would science survive Drawing on troves of declassified files including records released by the government for the first time through the author's efforts Restricted Data traces the complex evolution of the US nuclear secrecy regime from the first whisper of the atomic bomb through the mounting tensions of the Cold War and into the early twenty first century A compelling history of powerful ideas at war it tells a story that feels distinctly American rich sprawling and built on the conflict between high minded idealism and ugly fearful power Wellerstein examines the health of democracy in the face of big science big government and big weapons Science

Between Making And Knowing: Tools In The History Of Materials Research Joseph D Martin, Cyrus Mody, 2020-06-16 This book is indexed in Chemical Abstracts Service This book offers a comprehensive sketch of the tools used in material research and the rich and diverse stories of how those tools came to be We aim to give readers a sense of what tools materials researchers required in the late 20th century and how those tools were developed and became accessible The book is in a sense a collective biography of the components of what the philosopher of science Ian Hacking calls the instrumentarium of materials research Readers should gain an appreciation of the work materials researchers put into developing and using such tools and of the tremendous variety of such tools They should also gain some insight into the material and hence financial prerequisites for materials research Materials research requires funding for the availability and maintenance of its tools and the category of tools encompasses a broad range of substances apparatus institutions and infrastructure

Knowing Machines Donald A. MacKenzie, 1998 The essays are tied together by their explorations of connections primarily among technology society and knowledge and by their general focus on modern high technology They also share an emphasis on the complexity of technological formation and fixation and on the role of belief especially self validating belief in technological change

Science in the 20th Century and Beyond Jon Agar, 2012-04-09 Science in the Twentieth Century and beyond provides a much needed overview of the history of

science from 1900 to the present day It is the first book to survey modern developments in science during a century of unprecedented change conflict and uncertainty The scope is global and it covers a wide range of disciplines including life sciences information sciences as well as aspects of mathematics engineering and technology and medicine Back cover

State of Innovation Fred L. Block, Matthew R. Keller, 2015-11-17 The worst economic crisis since the Great Depression has generated a fundamental re evaluation of the free market policies that have dominated American politics for three decades State of Innovation brings together critical essays looking at the innovation industry in the context of the current crisis The book shows how government programs and policies have underpinned technological innovation in the US economy over the last four decades despite the strength of free market political rhetoric The contributors provide new insights into where innovations come from and how governments can support a dynamic innovation economy as the US recovers from a profound economic crisis State of Innovation outlines a 21st century policy paradigm that will foster cutting edge innovation which remains accountable to the public

Holographic Visions Sean F. Johnston, 2006-04-06 Holography exploded on the scientific world in 1964 but its slow fuse had been burning much longer Over the next four decades the echoes of that explosion reached scientists engineers artists and popular culture Emerging from classified military research holography evolved to represent the power of post war physics an aesthetic union of art and science the countercultural meanderings of holism a cottage industry for waves of would be entrepreneurs and a fertile plot device for science fiction New working cultures sprang up to mutate holography redefining its products reshaping its audiences and reconceiving its applications The outcomes included ever more sublime holograms and exquisitely sensitive measuring techniques but also priority disputes prurience and poisonous business rivalries New subjects cross intellectual borders and so do their explanations This book draws on the history and philosophy of science and technology social studies politics and cultural history to trace the trajectory of holography The result is an in depth account of how new science emerges Based on unprecedented interviews with pioneer holographers and extensive archival research it reveals how science technology art and wider culture are entwined in the modern world

A Short History of Physics in the American Century David C. Cassidy, 2013-09-02 As the twentieth century ended computers the Internet and nanotechnology were central to modern American life Yet the physical advances underlying these applications are poorly understood and underappreciated by U S citizens In this overview Cassidy views physics through America s engagement with the political events of a tumultuous century

More Than Nothing Aaron Sidney Wright, 2024 Across decades and disciplines More than Nothing offers a scoping history of the vacuum as a lens into the development of modern physics

Experimental Capitalism Steven Klepper, 2015-12-29 How American industries rose to dominate the economic landscape in the twentieth century For much of the twentieth century American corporations led the world in terms of technological progress Why did certain industries have such great success Experimental Capitalism examines six key industries automobiles pneumatic tires television receivers semiconductors lasers and penicillin and tracks

the highs and lows of American high tech capitalism and the resulting innovation landscape Employing nanoeconomics a deep dive into the formation and functioning of companies Steven Klepper determines how specific companies emerged to become the undisputed leaders that altered the course of their industry s evolution Klepper delves into why a small number of firms came to dominate their industries for many years after an initial period of tumult including General Motors Firestone and Intel Even though capitalism is built on the idea of competition among many he shows how the innovation process naturally led to such dominance Klepper explores how this domination influenced the search for further innovations He also considers why industries cluster in specific geographical areas such as semiconductors in northern California cars in Detroit and tires in Akron He finds that early leading firms serve as involuntary training grounds for the next generation of entrepreneurs who spin off new firms into the surrounding region Klepper concludes his study with a discussion of the impact of government and the potential for policy to enhance a nation s high tech industrial base A culmination of a lifetime of research and thought Experimental Capitalism takes a dynamic look at how new ideas and innovations led to America s economic primacy

To Hanoi and Back Wayne Thompson,2014-07-15 After nearly eighteen months of the largely unsuccessful bombing campaign called Operation Rolling Thunder the US Air Force began to look for ways to overcome technological geographical and political challenges in North Vietnam and use limited air power more effectively In 1972 the two Linebacker campaigns joined with other air operations to make a dramatic although temporary difference While they unleashed powerful B 52 area bombers the campaigns also demonstrated the efficacy of newly developed laser guided precision bombs Drawing upon twenty years of research in classified records Wayne Thompson integrates operational political and personal detail to present a full history of the Air Force role in the war against North Vietnam He provides an unprecedented view of the motivations and actions of the people involved from aircrews to generals to politicians in every phase of the air campaigns He outlines for instance the political reasons for President Johnson s reluctance to use B 52 bombers against major North Vietnamese targets He also examines how the media influenced US policy and how US prisoners became the war s most celebrated heroes The war in Southeast Asia ultimately pushed the Air Force toward adopting more flexible tactics and incorporating increasingly sophisticated weapons that would shape later conflicts

General Purpose Technology, Spin-Out, and Innovation Hiroshi Shimizu,2019-05-17 This book focuses on exploring the relationship between spin outs from incumbents and the patterns of innovation in general purpose technology Do spin outs really promote innovation What happens if star scientists leave the incumbents and establish a startup to target untapped markets Entrepreneurial spin outs have been recognized as an engine of innovation General purpose technology such as the steam engine in the Industrial Revolution has been considered an engine of growth This book provides new perspectives on how entrepreneurial spin outs shape the patterns of innovation in general purpose technology by integrating theoretical findings in industrial organizations and includes innovation studies and detailed evidence from a longitudinal case

study Concretely by longitudinally exploring the technological development of laser diodes in the USA and Japan this study examines how the existence or absence of an entrepreneurial strategic choice for spin outs influences the patterns of subsequent technological development The longitudinal analysis in this book shows that spin outs could hinder the subsequent development of existing technology when that technology is still at a nascent level because the cumulative effects of technological development could disappear if research and development personnel leave their parent firms in order to target different sub markets The findings of this book show that institutional settings designed to promote spin outs do not necessarily promote innovation The book offers novel theoretical insights into the relationship between institutions promoting spin outs and the developments of general purpose technology

Nonrelativistic Quantum X-Ray Physics Stefan P. Hau-Riege, 2015-01-12 Providing a solid theoretical background in photon matter interaction Nonrelativistic Quantum X Ray Physics enables readers to understand experiments performed at XFEL facilities and x ray synchrotrons As a result after reading this book scientists and students will be able to outline and perform calculations of some important x ray matter interaction processes Key features of the contents are that the scope reaches beyond the dipole approximation when necessary and that it includes short pulse interactions To aid the reader in this transition some relevant examples are discussed in detail while non relativistic quantum electrodynamics help readers to obtain an in depth understanding of the formalisms and processes The text presupposes a basic undergraduate level understanding of mechanics electrodynamics and quantum mechanics However more specialized concepts in these fields are introduced and the reader is directed to appropriate references While primarily benefiting users of x ray light sources the material is equally of relevance to researchers in various disciplines such as life sciences biology materials science physics and chemistry that plan on applying these new facilities in their respective fields

Industrial Policy Kenneth I. Carlaw, Richard G. Lipsey, 2022-07-14 Dismissing industrial policy because governments cannot pick winners is counter productive This Element studying selected major innovations illustrates the fact that virtually all major new technologies have been developed by a synergetic cooperation between the public and the private sectors each doing what it can do best By examining how R D is financed rather than where it takes place the authors show that the role of the public sector is much more pronounced than is often thought The nature of the cooperation who does what varies with the nature of each innovation so that simple one size fits all rules about what each sector should do are suspect These results are particularly important because they challenge the scepticism in the United states and elsewhere about the importance of industrial policy a scepticism that threatens to undermine the long term and necessary cooperation between the public and private sectors in promoting growth inducing innovations

Electronics David Morton, Joseph Gabriel, 2007-11-29 Electronics relates the fascinating stories of how scientists and engineers created and commercialized such devices as the transistor the Magnetron tube used to power microwave ovens the CRT cathode ray tube the laser the first integrated circuit the microprocessor and memory chips

Quantum Generations Helge

Kragh,2020-06-16 At the end of the nineteenth century some physicists believed that the basic principles underlying their subject were already known and that physics in the future would only consist of filling in the details They could hardly have been more wrong The past century has seen the rise of quantum mechanics relativity cosmology particle physics and solid state physics among other fields These subjects have fundamentally changed our understanding of space time and matter They have also transformed daily life inspiring a technological revolution that has included the development of radio television lasers nuclear power and computers In Quantum Generations Helge Kragh one of the world s leading historians of physics presents a sweeping account of these extraordinary achievements of the past one hundred years The first comprehensive one volume history of twentieth century physics the book takes us from the discovery of X rays in the mid 1890s to superstring theory in the 1990s Unlike most previous histories of physics written either from a scientific perspective or from a social and institutional perspective Quantum Generations combines both approaches Kragh writes about pure science with the expertise of a trained physicist while keeping the content accessible to nonspecialists and paying careful attention to practical uses of science ranging from compact disks to bombs As a historian Kragh skillfully outlines the social and economic contexts that have shaped the field in the twentieth century He writes for example about the impact of the two world wars the fate of physics under Hitler Mussolini and Stalin the role of military research the emerging leadership of the United States and the backlash against science that began in the 1960s He also shows how the revolutionary discoveries of scientists ranging from Einstein Planck and Bohr to Stephen Hawking have been built on the great traditions of earlier centuries Combining a mastery of detail with a sure sense of the broad contours of historical change Kragh has written a fitting tribute to the scientists who have played such a decisive role in the making of the modern world

Inventors and Inventions Doris Simonis,2007-09 From air conditioners to MRI scanners and from bicycles to frozen foods modern life would be unimaginable without the work of inventors Unlike other resources on inventions Inventors and Inventions surprises readers with its wide ranging exploration of inventors of the past and present including the creators of Kevlar Coca Cola eBay and the Global Positioning System
