Teaching Social Work Practice Mark Doel, 2017-07-05 *Teaching Social Work Practice* is a lively practical guide to developing your knowledge and skills as a teacher of social work practice in an agency setting. Social work students learn to practise in college and agency settings and this book will help to integrate the student's experience of learning. Teaching social work is different from practising social work and this book is designed to help practitioners to develop their teaching abilities with students. The author uses a combination of exercises, activities, notes and further reading to guide and encourage the reader through seven modules which include Anti-oppressive practice, teaching Models of adult learning and Methods of practice teaching. Each module is designed to help you learn how to teach social work practice. There is an emphasis on self-directed learning and active teaching. The book also gives advice on collecting evidence of your developing abilities and examples of how to demonstrate this in a portfolio. This is especially useful to people who are studying for the Practice Teaching Award. Finally, *Teaching Social Work Practice* provides useful digests of the relevant literature in the area of practice teaching and learning, helpful pointers for busy practitioners. *Teaching Social Work Practice* will be of interest to social workers who are considering practice teaching as well as those existing practice teachers who want to continue to develop their skills. College-based teachers and trainers will also find useful material. In addition, the book has much to offer social work managers who wish to develop their skills in staff and supervision and staff development.

Building the Foundation: Whole Numbers in the Primary Grades Maria G. Bartolini Bussi, Xu Hua Sun, 2018-03-29 This twenty-third ICMI Study addresses for the first time mathematics teaching and learning in the primary school and pre-school setting while also taking international perspectives, socio-cultural diversity and institutional constraints into account. One of the main challenges of designing the first ICMI primary school study of this kind is the complex nature of mathematics at the early level. Accordingly, a focus area that is central to the discussion was chosen together with a number of related questions. The broad area of Whole Number Arithmetic (WNA) including operations and relations and arithmetic word problems forms the core content of all primary mathematics curricula. The study of this core content area is often regarded as foundational for later mathematics learning. However, the principles and main goals of instruction on the foundational concepts and skills in WNA are far from universally agreed upon and practice varies substantially from country to country. As such, this study presents a meta-level analysis and synthesis of what is currently known about WNA, providing a useful base from which to gauge gaps and shortcomings as well as an opportunity to learn from the practices of different countries and contexts.
