[Business Process Management](#)

The Business Process Management (BPM) module is a set of tools you use to modify and extend application functionality without touching the source code. At the core of BPM is the directive. A directive defines a custom behaviour specified in the BPM workflow that can be applied to an operation. Three types of directives are available:

[Custom Business Process Management](#)

While the Business Process Management (BPM) module contains actions that address typical business needs, you may have additional requirements specific to your organization or industry. To handle these unique situations, you can customize BPM method, data, and updatable BAQ directives.

[Business Process Management Utilities](#)

Various utilities are available in the Business Process Management (BPM) module to help you:

[Global Alerts](#)

Global alerts are messages you activate to help specific users track data activity.

[Dashboards](#)

Dashboards are flexible, powerful tools that provide easy access to critical information in a real-time environment. In addition to the standard dashboards included with the application, you can also create custom dashboards. Custom dashboards can replace the need for workbenches, trackers, ShopVision reports, ad hoc reports, and even simple business intelligence reports.

Science, Technology and Taxation Robert F. van Brederode, 2012-08-01. This first comprehensive study of the interaction between technology and taxation approaches the subject along four main avenues: insight and analysis gained from empirical legal studies conducted in the area of taxation methods for improving the control and management of the tax function in business; tax auditing through statistical sampling; and changes in the fiscal environment as a result of technological capabilities. Among the topics that arise are the following: what choices of sampling methodology exist; determination of both one-sided and two-sided confidence intervals under what circumstances statistical sampling is acceptable as proof of underpayment; and as a basis for penalties, the use of sampling agreements as a tool to improve taxpayers' understanding of the process complexities encountered by the introduction of technology in tax administration in developing countries; technological capability to detect economic activity in the informal

sector technological innovation as substitute for inadequate human capacity improvements available to better monitor the movement and values of goods entering a country safeguards to prevent unauthorized use of personal information prioritizing resources to ensure that the key strategic objectives of the agency are being addressed government defensive action and the threat to privacy and capabilities and limitations of enterprise resource planning systems and tax engines Although the author pays especially detailed attention to the technologies developed and used by the United States Internal Revenue Service other notable systems developed by the European Union Brazil Mexico and China are also examined Various sampling methods and practices are illustrated with numerical examples As tax systems acquire ever higher levels of integration and because accuracy is crucial to the measurement of tax compliance the perspectives opened and expertly analyzed by the author will prove of great importance Practitioners tax policymakers and administrators tax standard setters and tribunals dealing with disputes over tax administration and procedure as well as academics and researchers will instantly recognize the book s great importance and practical value Corporate Controller's Handbook of Financial Management (2008-2009) Jae K.
