[The Secret Lives of Planets](#) Paul Murdin, 2019-07-11. A deft, frequently dramatic tour of Nature. A wonderfully clear and readable book. Gives a splendid overview of our Sun's planetary system, including its history and exploration. Dame Jocelyn Bell Burnell: "We have the impression that the solar system is perfectly regular, like a clock or a planetarium instrument. On a short timescale, it is. But seen in a longer perspective, the planets and their satellites have exciting lives full of events. For example, did you know that Saturn's moon Titan boasts lakes which contain liquid methane, surrounded by soaring hills and valleys exactly as the Earth did before life evolved on our fragile planet? Or that Mercury is the shyest planet? Or that Mars' biggest volcano is 100 times the size of Earth's, or that its biggest canyon is 10 times the depth of the Grand Canyon, or that it wasn't always red but blue? The culmination of a lifetime of astronomy and wonder." Paul Murdin's enchanting new book reveals everything you ever wanted to know about the planets, their satellites, and our place in the solar system.
