EARTH'S ROTATION

Have you ever wondered why we have day and night? It's why your shadow looks different at different times of the day? It's why the sun looks like it's moving across the sky throughout the day? It's because of Earth's rotation!

ROTATION

Earth spins around an invisible line called the axis. This spinning motion causes each 1/2 rotation (about 24 hours) to make one full day. As Earth rotates, different parts of it face the Sun. The length of the shadow depends on the angle of the Sun in the sky. The angle of the Sun changes as the Earth rotates.

OUR SOLAR SYSTEM

Our solar system is made up of the Sun and everything that orbits it. That includes eight planets, many moons, and smaller objects called asteroids and comets. The planets orbit the Sun in a path called an orbit. Some of the things that orbit the Sun are the planets, moons, asteroids, and comets. They all move in different paths and at different speeds.

WHAT IS THE ASTEROID BELT?

Between Mars and Jupiter, there is a zone with lots of rocky objects called asteroids. They are all made of rock and metal. Some are as small as a pebble, and some are as big as a mountain. They all move in different paths and at different speeds. The asteroid belt is a region of space between Mars and Jupiter that contains many asteroids.

Here is a diagram to describe the order of the planets.
