My STAAR Goal:

Moon Phases

Moon Cycle
The moon cycle starts from new moon, grows to new moon, takes 29.5 days.
The phases of the moon are a reflection of the Sun's light bouncing off of the moon's surface.
The moon appears to change shape because only certain portions of its sunlit side are seen as the moon revolves around Earth.

Understanding the Phases of the Moon
Waxing - an increasing amount of visible light on the moon's surface; light on the side facing Earth is increasing.
Waning - a decreasing amount of visible light on the moon's surface; light on the side facing Earth is decreasing.

Water Cycle

Water Cycle
The continuous movement of water between Earth and its atmosphere.
• Evaporation - the process of changing from a liquid to a gas.
• Condensation - the process of changing from a gas to a liquid.
• Precipitation - water that falls to Earth's surface as rain, snow, sleet, or hail.
• Runoff - precipitation that did not get absorbed by the ground flows into rivers, lakes, and oceans.
• Transpiration - the process through which plants release water vapor into the atmosphere.
• Sublimation - the process through which water vapor goes directly into the atmosphere.

The Water Cycle

The Sun's Role
The sun's heat causes water from Earth's surface (oceans, rivers, ponds, lakes) to evaporate.
The sun's heat causes water when it evaporates to rise into the air.
The sun's heat causes the air to rise and cool, which causes the water to condense into clouds.
The sun's heat causes the clouds to move and release the water as precipitation.

Changes to Earth's Surface

Weathering
The process of breaking down rock on Earth's surface.
Weathering breaks down rocks into smaller and smaller pieces and eventually helps to create soil.

Examples of Weathering		
Canyons	Rock Formations	Frost Wedging
Weathering caused by water	Weathering caused by wind	Weathering caused by ice

Erosion
The process by which water, ice, wind, or gravity moves pieces of rock or soil.
Erosion is the movement of a new location.

Examples of Erosion		
Waves on Beaches	Wind carrying sand	Glaciers carrying sediment
Erosion caused by water	Erosion caused by wind	Erosion caused by ice

Deposition
The process by which sediment settles and is deposited in a new location.
Build up new land on Earth's surface.

Examples of Deposition
