Intelligence Techniques for Computer Graphics Dimitri Plemenos, Georgios Miaoulis, 2008-10-02 The purpose of this volume is to present current work of the Intelligent Computer Graphics community a community growing up year after year Indeed if at the beginning of Computer Graphics the use of Artificial Intelligence techniques was quite unknown more and more researchers all over the world are nowadays interested in intelligent techniques allowing substantial improvements of traditional Computer Graphics methods The other main contribution of intelligent techniques in Computer Graphics is to allow invention of completely new methods often based on automation of a lot of tasks assumed in the past by the user in an imprecise and human time consuming manner The history of research in Computer Graphics is very edifying At the beginning due to the slowness of computers in the years 1960 the unique research concern was visualisation The purpose of Computer Graphics researchers was to find new visualisation algorithms less and less time consuming in order to reduce the enormous time required for visualisation A lot of interesting algorithms were invented during these first years of research in Computer Graphics The scenes to be displayed were very simple because the computing power of computers was very low So scene modelling was not necessary and scenes were designed directly by the user who had to give coordinates of vertices of scene polygons
