

FT-ONE GENERAL COVERAGE ALL MODE SOLID STATE TRANCEIVER

GENERAL DESCRIPTION

The FT-ONE presents substantial breakthroughs in the top of the line HF transceiver field. From the standpoints of operating control, circuit design and layout, performance, size and weight, the Yaesu engineering staff has stretched the very limits of the state-of-the-art for tomorrow's Amateur needs with the reliability normally reserved for the Commercial industry.

The front control panel of the FT-ONE sports both dual metering and dual digital displays along with twelve separate LED status indicators, showing at a glance exactly what the transceiver operating conditions are at all times. 24 keys, including a numerical keyboard, allow complete frequency control; including split frequency operation, scanning and 10 VFOs operable over the entire frequency range with one finger. Multiple tuning rates down to 10Hz per steps are also key selectable. Automatic Noise Gain Control (AMGC) is provided to eliminate background noise on transmit, and is adjustable from the front panel along with noise blanker threshold, Notch/AFB frequency, IF Shift and Width, RF speech processor compression level, SWR meter adjustments, FM Squelch, keyer speed, VOX gain and delay, and PIN attenuator, as well as the usual controls (except for Plate and Tune controls, since it is all solid state) a preselector, since RF tuning is microprocessor controlled; and a bandswitch, since it has just one band (30 MHz wide).

Glass epoxy plug-in circuit cards with spacious component layouts and easy access are used throughout the standard FT-ONE, so that many of the alignment procedures can be performed without removing anything but the top cover.
