

Example 1A: Solving Exponential Equations

Solve and check.

$$9^{8-x} = 27^{x-3}$$

$$(3^2)^{8-x} = (3^3)^{x-3}$$
 Rewrite each side with the same base; 9 and 27 are powers of 3.

$$3^{16-2x} = 3^{3x-9}$$
 To raise a power to a power, multiply exponents.

$$16 - 2x = 3x - 9$$
 Bases are the same, so the exponents must be equal.

$$x = 5$$
 Solve for x.

Problems in Exponents Richard S. Hammond, 2019-03-08 Exponents are one of the most important basics of Mathematics especially in calculation Exponents are also used in some important applications This includes compound interest the growth of population and bacteria growth That is understanding well about the definitions and properties of exponents are really needed in learning Mathematics Problems in Exponents is a book that was written about the foundations of exponents There are three main chapters in this little book The first chapter of this book is about the answers to the question what is exponents This chapter will relate the readers to the definition of exponents and some significant properties of them such as the multiplication or division of two powers that have the same base power of power the 0th power of a number etc The second chapter of this book is about exponential equations This chapter is little bit harder than the first chapter of this book In this chapter we tell the readers about the rule in solving exponential equations We give some examples to illustrate about how to solve exponential equations Additionally there are some exercises at the end of the chapter We list some good problems to the readers to solve it by using what they have learnt in the first two chapters The last part of this book is about exponential inequalities Another important section in exponents is exponential inequalities In this chapter we explain the readers by using problem solution strategy We solve all of problems step by step We try to simplify this book to help readers understand clearly about exponents We hope this little book will become the readers close friend when they think about exponents Richard S Hammond
