*Tools and Algorithms for the Construction and Analysis of Systems* Axel Legay,Tiziana Margaria,2017-03-30 The two book set LNCS 10205 10206 constitutes the proceedings of the 23rd International Conference on Tools and Algorithms for the Construction and Analysis of Systems TACAS 2017 which took place in Uppsala Sweden in April 2017 held as Part of the European Joint Conferences on Theory and Practice of Software ETAPS 2017 The 48 full papers 4 tool demonstration papers and 12 software competition papers presented in these volumes were carefully reviewed and selected from 181 submissions to TACAS and 32 submissions to the software competition They were organized in topical sections named verification techniques learning synthesis automata concurrency and bisimulation hybrid systems security run time verification and logic quantitative systems SAT and SMT and SV COMP *Learning with Fractional Orthogonal Kernel Classifiers in Support*

*Vector Machines* Jamal Amani Rad,Kourosh Parand,Snehashish Chakraverty,2023-03-18 This book contains select chapters on support vector algorithms from different perspectives including mathematical background properties of various kernel functions and several applications The main focus of this book is on orthogonal kernel functions and the properties of the classical kernel functions Chebyshev Legendre Gegenbauer and Jacobi are reviewed in some chapters Moreover the fractional form of these kernel functions is introduced in the same chapters and for ease of use for these kernel functions a tutorial on a Python package named ORSVM is presented The book also exhibits a variety of applications for support vector algorithms and in addition to the classification these algorithms along with the introduced kernel functions are utilized for solving ordinary partial integro and fractional differential equations On the other hand nowadays the real time and big data applications of support vector algorithms are growing Consequently the Compute Unified Device Architecture CUDA parallelizing the procedure of support vector algorithms based on orthogonal kernel functions is presented The book sheds

light on how to use support vector algorithms based on orthogonal kernel functions in different situations and gives a significant perspective to all machine learning and scientific machine learning researchers all around the world to utilize fractional orthogonal kernel functions in their pattern recognition or scientific computing problems

**Ad Hoc Networks** Shiwen Mao, Scott Midkiff, Hua Zhu, 2010-02-17 Ad hoc networks refer to the wireless networking paradigm that covers a variety of network forms for specific purposes such as mobile ad hoc networks sensor networks vehicular networks underwater networks underground networks personal area networks and home networks The various forms of ad hoc networks promise a broad scope of applications in civilian commercial and military areas which have led to significant new research problems and challenges and have attracted great efforts from academia industry and government This unique networking paradigm necessitates re-examination of many established wireless networking concepts and protocols and calls for developing new fundamental understanding of problems such as interference mobility connectivity capacity and security among others While it is essential to advance theoretical research on fundamentals and practical research on efficient algorithms and protocols it is also critical to develop useful applications experimental prototypes and real world deployments to achieve a practical impact on our society for the success of this networking paradigm The annual International Conference on Ad Hoc Networks AdHocNets is a new event that aims at providing a forum to bring together researchers from academia as well as practitioners from industry and government to meet and exchange ideas and recent research work on all aspects of ad hoc networks As the first edition of this event AdHocNets 2009 was successfully held in Niagara Falls Ontario Canada during September 22-25 2009

*College Algebra and Trigonometry with Graphing Technology* David E. Stevens, 1996 This text adheres to recently suggested math guidelines with an emphasis on applications technology critical thinking and group collaborative learning Graphing technology is integrated throughout but there is also an emphasis on algebraic understanding Interactive pedagogy encourages active learning and builds student confidence Applied problems from the fields of science engineering and business relate college algebra to real life

*Integer Programming and Combinatorial Optimization* Friedrich Eisenbrand, Jochen Koenemann, 2017-06-06 This book constitutes the refereed proceedings of the 19th International Conference on Integer Programming and Combinatorial Optimization IPCO 2017 held in Waterloo IN Canada in June 2017 The 36 full papers presented were carefully reviewed and selected from 125 submissions The conference is a forum for researchers and practitioners working on various aspects of integer programming and combinatorial optimization The aim is to present recent developments in theory computation and applications in these areas The scope of IPCO is viewed

in a broad sense to include algorithmic and structural results in integer programming and combinatorial optimization as well as revealing computational studies and novel applications of discrete optimization to practical problems

**Lectures on Field Theory and Topology** Daniel S. Freed, 2019-08-23 These lectures recount an application of stable homotopy theory to a concrete problem in low energy physics the classification of special phases of matter While the joint work of the author and Michael Hopkins is a focal point a general geometric frame of reference on quantum field theory is emphasized Early lectures describe the geometric axiom systems introduced by Graeme Segal and Michael Atiyah in the late 1980s as well as subsequent extensions This material provides an entry point for mathematicians to delve into quantum field theory Classification theorems in low dimensions are proved to illustrate the framework The later lectures turn to more specialized topics in field theory including the relationship between invertible field theories and stable homotopy theory extended unitarity anomalies and relativistic free fermion systems The accompanying mathematical explanations touch upon higher category theory duals to the sphere spectrum equivariant spectra differential cohomology and Dirac operators The outcome of computations made using the Adams spectral sequence is presented and compared to results in the condensed matter literature obtained by very different means The general perspectives and specific applications fuse into a compelling story at the interface of contemporary mathematics and theoretical physics
