

SOLVING LINEAR SYSTEMS ALGEBRAICALLY

ALGEBRAIC METHODS

SUBSTITUTION

- Solve one equation for a variable.
- Substitute the expression from step 1 into the opposite equation in place of that variable.
- Solve the equation.
- Substitute the solution from step 3 into an original equation and solve to find the second variable.
- Write your solution as an ordered pair.

Example:

$$x + 7y = 0$$

$$2x - 8y = 22$$

$$\begin{aligned} x &= -7y \\ 2(-7y) - 8y &= 22 \\ -14y - 8y &= 22 \\ -22y &= 22 \\ y &= -1 \end{aligned}$$

$$\begin{aligned} x + 7(-1) &= 0 \\ x - 7 &= 0 \\ x &= 7 \end{aligned}$$

Solution: (7, -1)

ELIMINATION

- Arrange both equations in the form $Ax + By = C$.
- Multiply one or both equations to produce a variable that will cancel out.
- Add the two equations together and solve for a variable.
- Substitute the solution from step 3 into an original equation and solve to find the second variable.
- Write your solution as an ordered pair.

Example:

$$6x - 12y = 24$$

$$2x - 6y = 40 \text{ } \times 6$$

$$\begin{aligned} 6x - 12y &= 24 \\ + 6x - 36y &= 240 \\ -48y &= 460 \\ y &= -1 \end{aligned}$$

$$\begin{aligned} 6x - 12(-1) &= 24 \\ 6x + 12 &= 24 \\ 6x &= 12 \\ x &= 2 \end{aligned}$$

Solution: (2, -1)

1 and 2 are the most efficient methods for solving the system $x + 7y = 0$ and $2x - 8y = 22$.

SUBSTITUTION - Can one of the equations be solved for x or y in one step or less?

ELIMINATION - Are both equations in the form $Ax + By = C$? Or can we rearrange them to be that form in one step or less?

Identify the most efficient method for solving the system. Then solve the system.

1 $y = 4x - 9$ method: substitution
 $x = x - 3$

$$\begin{aligned} x - 3 &= 4x - 9 \\ -3 &= 3x - 9 \\ 6 &= 3x \\ 2 &= x \end{aligned}$$

$$\begin{aligned} y &= 4(2) - 9 \\ y &= 8 - 9 \\ y &= -1 \end{aligned}$$

Solution: (2, -1)

2 $4x + 2y = 10$ method: substitution
 $x = y + 13$

$$\begin{aligned} x &= y + 13 \\ 4(y + 13) + 2y &= 10 \\ 4y + 52 + 2y &= 10 \\ 6y + 52 &= 10 \\ 6y &= -42 \\ y &= -7 \end{aligned}$$

$$\begin{aligned} x &= (-7) + 13 \\ x &= 7 + 13 \\ x &= 6 \end{aligned}$$

Solution: (6, -7)

Algebraic Modeling Systems Josef Kallrath, 2012-02-16 This book Algebraic Modeling Systems Modeling and Solving Real World Optimization Problems deals with the aspects of modeling and solving real world optimization problems in a unique combination It treats systematically the major algebraic modeling languages AMLs and modeling systems AMLs used to solve mathematical optimization problems AMLs helped significantly to increase the usage of mathematical optimization in industry Therefore it is logical consequence that the GOR Gesellschaft f r Operations Research Working Group Mathematical Optimization in Real Life had a second meeting devoted to AMLs which after 7 years

followed the original 71st Meeting of the GOR Gesellschaft für Operations Research Working Group Mathematical Optimization in Real Life which was held under the title Modeling Languages in Mathematical Optimization during April 23-25 2003 in the German Physics Society Conference Building in Bad Honnef Germany While the first meeting resulted in the book Modeling Languages in Mathematical Optimization this book is an offspring of the 86th Meeting of the GOR working group which was again held in Bad Honnef under the title Modeling Languages in Mathematical Optimization *The Elementary Algorithms of V. 2. 5 Why Interactive Staff*, 2001-08 PETSc for Partial Differential Equations: Numerical Solutions in C and Python Ed Bueler, 2020-10-22 The Portable Extensible Toolkit for Scientific Computation PETSc is an open source library of advanced data structures and methods for solving linear and nonlinear equations and for managing discretizations This book uses these modern numerical tools to demonstrate how to solve nonlinear partial differential equations PDEs in parallel It starts from key mathematical concepts such as Krylov space methods preconditioning multigrid and Newton's method In PETSc these components are composed at run time into fast solvers Discretizations are introduced from the beginning with an emphasis on finite difference and finite element methodologies The example C programs of the first 12 chapters listed on the inside front cover solve mostly elliptic and parabolic PDE problems Discretization leads to large sparse and generally nonlinear systems of algebraic equations For such problems mathematical solver concepts are explained and illustrated through the examples with sufficient context to speed further development PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs emphasizing practice more than theory Well structured examples lead to run time choices that result in high solver performance and parallel scalability The last two chapters build on the reader's understanding of fast solver concepts when applying the Firedrake Python finite element solver library This textbook the first to cover PETSc programming for nonlinear PDEs provides an on ramp for graduate students and researchers to a major area of high performance computing for science and engineering It is suitable as a supplement for courses in scientific computing or numerical methods for differential equations **Intermediate Algebra** Decell, 2001-08 **CliffsNotes GRE Math Review** BTPS Testing, 2013-07 The perfect math instruction course for anyone preparing for the GRE exam Includes sample problems throughout Features an extensive math review targeted specifically for the math sections of the GRE Includes two full GRE math sections with answers and explanations **Numerical Algebra, Matrix Theory, Differential-Algebraic Equations and Control Theory** Peter Benner, Matthias Bollhöfer, Daniel Kressner, Christian Mehl, Tatjana Stykel, 2015-05-09 This edited volume highlights the scientific contributions of Volker Mehrmann a leading expert in the area of numerical linear algebra matrix theory differential algebraic equations and control theory These mathematical research areas are strongly related and often occur in the same real world applications The main areas where such applications emerge are computational engineering and sciences but increasingly also social sciences and economics This book also reflects some of Volker Mehrmann's major career stages Starting out working in the areas of numerical linear

algebra his first full professorship at TU Chemnitz was in Numerical Algebra hence the title of the book and matrix theory Volker Mehrmann has made significant contributions to these areas ever since The highlights of these are discussed in Parts I and II of the present book Often the development of new algorithms in numerical linear algebra is motivated by problems in system and control theory These and his later major work on differential algebraic equations to which he together with Peter Kunkel made many groundbreaking contributions are the topic of the chapters in Part III Besides providing a scientific discussion of Volker Mehrmann's work and its impact on the development of several areas of applied mathematics the individual chapters stand on their own as reference works for selected topics in the fields of numerical linear algebra matrix theory differential algebraic equations and control theory

Algebraic and Geometric Ideas in the Theory of Discrete Optimization Jesus A. De Loera, Raymond Hemmecke, Matthias Kppe, 2013-01-31 In recent years many new techniques have emerged in the mathematical theory of discrete optimization that have proven to be effective in solving a number of hard problems This book presents these recent advances particularly those that arise from algebraic geometry commutative algebra convex and discrete geometry generating functions and other tools normally considered outside of the standard curriculum in optimization These new techniques all of which are presented with minimal prerequisites provide a transition from linear to nonlinear discrete optimization This book can be used as a textbook for advanced undergraduates or first year graduate students in mathematics computer science or operations research It is also appropriate for mathematicians engineers and scientists engaged in computation who wish to gain a deeper understanding of how and why algorithms work

Structures in Natural Language Shalom Lappin, Jean-Philippe Bernardy, 2022-12-23 Algebraic Structures in Natural Language addresses a central problem in cognitive science concerning the learning procedures through which humans acquire and represent natural language Until recently algebraic systems have dominated the study of natural language in formal and computational linguistics AI and the psychology of language with linguistic knowledge seen as encoded in formal grammars model theories proof theories and other rule driven devices Recent work on deep learning has produced an increasingly powerful set of general learning mechanisms which do not apply rule based algebraic models of representation The success of deep learning in NLP has led some researchers to question the role of algebraic models in the study of human language acquisition and linguistic representation Psychologists and cognitive scientists have also been exploring explanations of language evolution and language acquisition that rely on probabilistic methods social interaction and information theory rather than on formal models of grammar induction This book addresses the learning procedures through which humans acquire natural language and the way in which they represent its properties It brings together leading researchers from computational linguistics psychology behavioral science and mathematical linguistics to consider the significance of non algebraic methods for the study of natural language The text represents a wide spectrum of views from the claim that algebraic systems are largely irrelevant to the contrary position that non algebraic learning methods are engineering devices for efficiently identifying the patterns that underlying grammars and semantic models generate for natural language input There are interesting and important perspectives that fall at intermediate points between these opposing approaches and they may combine elements of both It will appeal to researchers and advanced students in each of these fields as well as to anyone who wants to learn more about the relationship between computational models and natural language Resources in Education ,2001-10 **Key Ideas in Teaching Mathematics** Anne Watson, Keith Jones, Dave Pratt, 2013-02-21 Big ideas in the mathematics curriculum for older school students especially those that are hard to learn

and hard to teach are covered in this book It will be a first port of call for research about teaching big ideas for students from 9 19 and also has implications for a wider range of students These are the ideas that really matter that students get stuck on and that can be obstacles to future learning It shows how students learn why they sometimes get things wrong and the strengths and pitfalls of various teaching approaches Contemporary high profile topics like modelling are included The authors are experienced teachers researchers and mathematics educators and many teachers and researchers have been involved in the thinking behind this book funded by the Nuffield Foundation An associated website hosted by the Nuffield

Foundation summarises the key messages in the book and connects them to examples of classroom tasks that address important learning issues about particular mathematical ideas
