Due Feb 16 by 2:59am Points 1 Submitting an external tool

Instructions

Write a public static method named `productTable` which returns a 2d array which represents a multiplication table. Each element in the array should be equal to the product (multiplication) of the indices of the cell. The method should take 2 parameters which are equal to the number of rows and number of columns of the multiplication table. For example, the call `productTable(6, 5)` should return the array represented by the table below:

0	0	0	0	0
0	1	2	3	4
0	2	4	6	8
0	3	6	9	12
0	4	8	12	16
0	5	10	15	20

Write your `productTable` method in the `U8_L1_Activity_Two` class. Use the runner class to test your method but do not add a main method to your `U8_L1_Activity_Two.java` file or your code will not be scored correctly.
