## **Smart Learner Agricultural Science:**

*Smart Learning Ecosystems as Engines of the Green and Digital Transition* Mihai Dascalu, Óscar Mealha, Sirje Virkus, 2023-09-26 The book brings together the contributions of the 8th International Conference on Smart Learning Ecosystems and Regional Development aimed at promoting reflection and discussion on the relevance of smart learning ecosystems for regional development and social innovation e.g. schools, campuses, working places, informal learning contexts and on how the effectiveness of the relation of citizens and smart ecosystems can be boosted. This forum is interested in understanding how technology-mediated instruments can foster the citizens' engagement with learning ecosystems and territories, namely by understanding innovative human-centric design and development models, techniques, education training practices, informal social learning, innovative citizen-driven policies, technology-mediated experiences and their impact. This set of concerns contributes to fostering the social innovation sectors and ICT economic development and deployment strategies alongside new policies for smarter proactive citizens.

*AI in Agriculture for Sustainable and Economic Management* Sirisha Potluri, Suneeta Satpathy, Santi Swarup Basa, Antonio Zuorro, 2024-08-01 This book explains the best practices and their respective outcomes in artificial intelligence (AI) to meet sustainable development goals and demands. It examines the practices, technologies, and innovations at the core of various research issues to meet the sustainable development demands in agriculture to balance social, economic, and environmental sustainability with AI. *AI in Agriculture for Sustainable and Economic Management* discusses AI-driven nanotechnology approaches for precision agriculture and solutions for the optimization of farming resources and their management. The authors examine the impact of AI in agriculture and how technology-driven sustainable farming with smart waste water treatment for zero waste for the circular economy can extend crop shelf life. It discusses how AI expertise can be advantageous to envisage and evaluate the increasing demands of productivity and to help to maintain ecosystems and strengthen the capacity for crop adaptation in response to drastic changes in climate and weather, natural disasters, and other significant factors. These findings and practices are also useful to emphasize how an agricultural ecosystem can be advanced and industrialized so that it can aid not only large commercial farms but also smaller farmlands. Finally, it also discusses how AI practices will help to find a balance between the volume of food manufactured and the proper maintenance of the ecosystem. This book is intended for researchers and upper graduate students interested in artificial intelligence in agricultural engineering, AI advances in crop science, and technology for sustainable development.
