economics games researchers examined levels of fairness cooperation and norms for punishing those who violate expectations of equality across a diverse swath of societies from hunter gatherers in Tanzania to a small town in rural Missouri These experiments tested individuals willingness to conduct mutually beneficial transactions with strangers that reap rewards only at the expense of taking a risk on the cooperation of others The results show a robust relationship between exposure to market economies and social norms that benefit the group over narrow economic self interest Levels of fairness and generosity are generally higher among individuals in communities with more integrated markets Religion also plays a powerful role Individuals practicing either Islam or Christianity exhibited a stronger sense of fairness possibly because religions with high moralizing deities equipped with ample powers to reward and punish encourage greater prosociality The size of the settlement also had an impact People in larger communities were more willing to punish unfairness compared to those in smaller societies Taken together the volume supports the hypothesis that social norms evolved over thousands of years to allow strangers in more complex and large settlements to coexist trade and prosper Innovative and ambitious Experimenting with Social Norms synthesizes an unprecedented analysis of social behavior from an immense range of human societies The fifteen case studies analyzed in this volume which include field experiments in Africa South America New Guinea Siberia and the United States are available for free download on the Foundation s website www.russellsage.org
