SAN Boot Implementation and Best Practices Guide for IBM System Storage Sangam Racherla, Delmar Demarchi, Scott Dybas, Bobby Stark, Mansoor Syed, IBM Redbooks, 2012-09-30 Booting servers from a storage area network SAN is being used increasingly in complex data center environments today due to its significant benefits over the traditional method of booting from local disks SAN Boot enables organizations to maximize consolidation of their IT resources minimize their equipment costs and realize the considerable management benefits of centralizing the boot process In SAN Boot you can deploy diskless servers in an environment where the boot disk is located on often RAID capable storage connected to the SAN The server initiator communicates with the storage device target through the SAN using the Fibre Channel host bus adapter HBA The system

downtime is greatly minimized in case a critical component such as a processor memory or host bus adapter fails and needs to be replaced The system administrator needs to swap only the hardware and reconfigure the HBA s BIOS switch zoning and host port definitions on the storage server The system image still exists on the logical drive therefore the server is fully operational after the hardware swap and configuration change is completed This IBM Redbooks publication can help you with the SAN Boot implementation We present various SAN Boot scenarios using IBM System Storage products that include DS5000 DS8000 XIV and SVC The operating systems that are covered include Windows 2008 Red Hat Linux SUSE Linux and VMware

VMware Implementation with IBM System Storage DS5000 Sangam Racherla, Diego Silva Cogo, Mario David Ganem, Hartmut Lonzer, Minja Obradovic, Gabriel Requejo, IBM Redbooks, 2013-06-14 In this IBM Redbooks publication we compiled best practices for planning designing implementing and maintaining IBM Midrange Storage Solutions In this publication we use IBM System Storage DS5000 storage subsystem for the implementation procedures and the same procedures can be used for implementations with DCS3700 or DS3500 storage subsystems We also compiled configurations for a VMware ESX and VMware ESXi Server host environment Setting up an IBM Midrange Storage Subsystem is a challenging task Our principal objective in this book is to provide you with a sufficient overview to effectively enable storage area network SAN storage and VMware There is no single configuration that is satisfactory for every application or situation However the effectiveness of

the VMware implementation is enabled by careful planning and consideration Although the compilation of this publication is derived from an actual setup and verification we did not stress test or test for all possible use cases that are used in a limited configuration assessment Because of the highly customizable nature of a VMware ESXi host environment you must consider your specific environment and equipment to achieve optimal performance from an IBM Midrange Storage Subsystem When you are weighing the recommendations in this publication you must start with the first principles of input output I O performance tuning Each environment is unique and the correct settings that are used depend on the specific goals configurations and demands for the specific environment This publication is intended for technical professionals who want to deploy VMware ESXi and VMware ESX Servers with IBM Midrange Storage Subsystems *Linux System Administration* M. Carling, Stephen Degler, James Dennis, 2000 Authors M Carling and Jim Dennis provide system administrators with expert advice on managing their Linux systems on a daily basis In depth coverage delves into the issues of integrating Linux into corporate heterogeneous network environments Trends in Network and Pervasive Computing - ARCS 2002 Hartmut Schmeck, Theo Ungerer, Lars Wolf, 2003-07-31 This book constitutes the refereed proceedings of the International Conference on Architecture of Computing Systems ARCS 2002 held in Karlsruhe Germany in April 2002 The 18 revised full papers presented were carefully reviewed and selected from 42 submissions The papers are organized in topical sections on context aware systems system aspects networking processor architecture and middleware and verification
