Zoo-A-Logical Math Thomas Kearney, 2012-04 The work for this book began with a course I created and taught called Animal Behavior I always knew that there was a strong magnetic bond between people and animals but it wasn't until I began working on my curriculum that I truly found out how strong this bond really was Millions of people young and old will visit zoos and aquariums each year People stand in front of the animals hypnotized by the every movement of the animal People seemed to be looking not just at the animal but almost as if they were looking inside these animals wondering and questioning about the lives of some of our most distant animal relatives In my classroom I found the exact same kinds of responses The discussions and questions of my students motivated me to share with you the lives and abilities of some of the most amazing living creatures in the world People realize that humans are also animals but the belief that we have superior intelligence and problem solving abilities makes us think we are far superior to all of the rest of our Animal World As I began to learn more and lead my student discussions I soon realized that maybe our intelligence was the only thing that we really did have in our superiority over the rest of our animal relatives I began to look into the idea of comparing humans to animals in a wide variety of behaviors and activities and soon a brand new window into the REAL world of animals began to open up I

soon realized that even the most insignificant animals in our world were really superstars when compared to humans By using math we are able to truly get a comparison of animals and how they relate to our own human abilities As I began to create the problems and do the math it became very evident that I began to get the responses that I had hoped for I soon began to call these responses the Wow factor A number of times the teachers that have worked on the problems would actually go back and do the problems a second time because there has to be a mistake or no way that this can be true There were no mistakes and the math did not lie The math allowed us to look at the animals in a totally different way I hope that you too will be amazed and wowed by some of these amazing animals that we share our world with **Content Area**

Kathleen Heid,Patricia S. Wilson,Glendon W. Blume,2015-12-01 A perennial discussion about teacher development is the optimal content background for teachers In recent years that discussion has taken center stage in the work of mathematics education researchers mathematicians mathematics professional developers and mathematics education policymakers Much of the existing and prior work in this area has been directed toward mathematical knowledge for teaching at the elementary level The work described in this volume takes a sometimes neglected approach focusing on the dynamic nature of mathematical understanding rather than on a stable description of mathematical knowledge and on mathematics for secondary teaching rather than mathematics for teaching at the elementary level The work reported in Mathematical Understanding for Secondary Teaching A Framework and Classroom Based Situations is a practice based response to the question of what mathematical understandings secondary teachers could productively use in their teaching For each of more than 50 events our team of almost 50 mathematics educators who were experienced mathematics teachers developed descriptions of the mathematics that teachers could use each of those descriptions consisting of the event and the mathematics related to the event is what we call a Situation We developed our Framework for Mathematical Understanding for Secondary Teaching MUST based on an analysis of our entire set of Situations We call the work practice based because the MUST framework is based on actual events that we witnessed in our observations of secondary mathematics practice Groups of mathematics teachers can use this volume to enhance their own understandings of secondary mathematics School leaders and professional developers in secondary mathematics will find our MUST

Framework and Situations useful as they work with teachers in enhancing and deepening their understanding of secondary mathematics Mathematics teacher educators and mathematicians who teach mathematics to prospective and in service secondary teachers will be able to couch their mathematical discussions in the Situations examples that arise from secondary mathematics classrooms They will be able to use this volume as they design courses and programs that enhance mathematics from the perspectives identified in the MUST framework Policymakers and researchers can use our MUST framework as they consider the mathematics background needed by teachers

encourages students to ask questions about mathematics they study Each chapter except the last one includes an activity set that can be used for the development of the variety of assignments for teachers Digital tools used in the book include spreadsheets Wolfram Alpha GeoGebra Kid Pix Studio Deluxe and Graphing Calculator Pacific Tech **Math Matters**
