

## How to Solve Equations with Variables on Both Sides?

1. Use the distributive rule to remove any parenthesis.
2. Add or subtract terms to get the variables on one side and the constants on the other.
3. Multiply or divide to isolate the variable

Example:

$$5(x + 2) = 3x - 8$$

$$5x + 10 = 3x - 8$$

$$5x - 3x + 10 = 3x - 3x - 8$$

$$2x + 10 = -8$$

$$2x + 10 - 10 = -8 - 10$$

$$2x = -18$$

$$2x/2 = -18/2$$

$$x = -9$$

Check:

$$5(-9 + 2) = 3(-9) - 8$$

$$-35 = -35$$

**Linear Equations** P. M. Cohn,2012-12-06 LINEAR equations play an important part not only in mathematics itself but also in many fields in which mathematics is used Whether we deal with elastic deformations or electrical networks the flutter of aeroplane wings or the estimation of errors by the method of least squares at some stage in the calculation we encounter a system of linear equations In each case the problem of solving the equations is the same and it is with the mathematical treatment of this question that this book is concerned By meeting the problem in its pure state the reader will gain an insight which it is hoped will help him when he comes to apply it to his field of work The actual process of setting up the equations and of interpreting the solution is one which more properly belongs to that field and in any case is a problem of a different nature altogether So we need not concern ourselves with it here and are able to concentrate on the mathematical aspect of the situation The most important tools for handling linear equations are vectors and matrices and their basic properties are developed in separate chapters The method by which the nature of the solution is described is one which leads immediately to a solution in practical cases and it is a method frequently adopted when solving problems by mechanical or electronic computers

Systems of Linear Equations, Part 2 , Expand your tools for solving systems of linear equations by exploring the method of solving by elimination This technique allows you to eliminate one variable by performing addition subtraction or multiplication on both sides of an equation allowing a straightforward solution for the remaining variable

**Linear Equations in One Variable Workbook** Richard Hammond,2021-05-12 This is a book in the problem series books In this series we stay focused on learning fundamental mathematics through problems Why do we care about this The reason is the best way to learn mathematics is to do mathematics Hence learning through problems is what we should consider To be a part in mathematics development we try to create accessible sources for all readers This book mainly focuses on linear equations in one variable We always see this kind of equation It is the fundamental part of mathematics Hence we must know what is it And how to solve it This book contains four parts Basics Linear Equations in One

Variable Problems Solutions In Basics we restate some important properties that might be used to solve linear equations in one variable We start the next chapter Linear equations in one variable by introducing readers the definition of a linear equation in one variable and how to solve it The last two parts of the book are closely connected We list the many problems in equation in problem part After that we try to give full solutions to each problem in solution part Readers should try to solve the problems first before seeing the solutions This method of learning will help readers to master their basic faster We hope readers enjoy learning from this book Richard S Hammond      *Solving Linear Equations with DERIVE* Bernhard Kutzler,1998

*The Multifaceted Variable Approach* Salma Tahir,Michael Cavanagh,2010 This paper presents a comparison of the solution strategies used by two groups of Year 8 students as they solved linear equations The experimental group studied algebra following a multifaceted variable approach while the comparison group used a traditional approach Students in the experimental group employed different solution strategies namely balancing method working backwards and guess and check for solving different linear equations whereas students in the comparison group tended to use a single procedural approach It is concluded that the multifaceted approach developed students concepts not only of variables but also of equations Contains 4 tables and 1 figure For the complete proceedings Shaping the Future of Mathematics Education Proceedings of the Annual Conference of the Mathematics Education Research Group of Australasia 33rd Freemantle Western Australia Australia July 3 7 2010 see ED520764      [Solving Linear Equations, Part 2](#) , Investigating more complicated examples of linear equations learn that linear equations fall into three categories First the equation might have exactly one solution Second it might have no solutions at all Third it might be an identity which means every number is a solution      [Algebra, Parabola, and Trigonometric Equations Which Can Be Used on Sides of Right Triangles](#) Colin Gardner,2006-06-01 Provides new parameters for the quadratic equation such that two dozen or more trigonometric equations using these same parameters provide identical results Twenty two of these trigonometric equations have six different looking coefficients which make them all equal to one quadratic equation Each equation using these same parameters has three sets of new parameters which make them so they can be on sides of right triangles with six sets that will do this is included Each quadratic equation having an integer solution has also a Pythagorean equation which has identical answers Equations to this is provided One set of data is provided that makes this all possible with the three answers one for each side being provided Non integer solutions are also possible Each set of equations or integers on the sides of right triangles can be put into a parabolic form that is what you see on the two legs of a right triangle can be added together to obtain the correct equation or integer on its hypotenuse These three new quadratic dependent coefficients can be produced by four independent variables with criteria on how to use them is provided Conversion equation between the three and four types of new parameters is provided Equations to make many new parabolic equations is provided with one example being provided A table of over a dozen different algebra equations which have two or three different trigonometric

Cohn, 1971 A Learning Trajectory for Intermediate Algebra Students Transitioning from Solving Linear Equations to Factorable Quadratic Equations Silvia Anel Madrid Jaramillo, 2021 Research on learning quadratic equations reports students difficulties with procedural fluency and conceptual understanding of standard methods for solving such equations There is little research on how to support students mathematical development for factorable quadratic equations without using the concept of function and function notation I investigated how students may develop connections between essential concepts for solving factorable quadratic equations starting from their current conception of solving linear equations To achieve this I conducted a design research study Based on the pilot s data analysis I proposed key developmental understandings KDUs M A Simon s construct for students learning to solve factorable quadratic equations These KDUs informed the two subsequent iterative cycles through which I developed a hypothetical learning trajectory HLT for supporting students understanding of this topic In each cycle I prepared a HLT including goals mathematical tasks and hypotheses conducted individual task based interviews and used qualitative methods to analyze participants engagement with and reasoning during the tasks I interviewed 12 university

students enrolled in an intermediate algebra course The data analysis was based on comparing the anticipated and observed learning trajectories This study contributes a HLT and an explanatory framework for supporting students in developing a richer understanding of solving factorable quadratic equations I incorporated two perspectives of solutions to a linear or quadratic equation symbolically as numbers that satisfy an equation e g  $ax^2 + bx + c = 0$  and graphically as the x coordinate s of the x intercept s of the corresponding graph e g  $y = ax^2 + bx + c$  The instructional tasks in this trajectory offer students opportunities for subtle but crucial conceptual transitions as they engage their prior knowledge of linear equations develop an intuitive understanding of why the method of factoring works understand how many solutions a linear or quadratic equation may have notice the algebraic structure of a factored equation and understand how the zero product property applies to solving factorable quadratic equations The data analysis shows that the proposed HLT is viable The account of how participants engaged with the tasks and interacted with the researcher illustrates how teachers may probe and guide students towards reflecting on their mathematical activity and understanding of this topic
