Silveira,Sandra Isabel Morena Abril,Mariana Härter Remiao,Caroline Gomes Lucas,2023-03-30 Although Gregor Mendel is considered the father of genetics he has never taken the credit for his principles on heredity Mendel s treatises though they were part of the collection of the largest European libraries in the 19th century were only rediscovered in 1900 16 years after his death Mendel s revolutionary ideas would have given greater strength to the formulation of Charles Darwin s ideas about common descent and gradual evolution through natural selection presented in 1859 in *The Origin of Species* However Darwin was not totally ignorant of the possibility of genetic heredity He even described invisible characters emerging in atavistic situations and named his hypothetical particle of heredity as gemmules It is remarkable that the invisible characters and gemmules referred by Darwin are what we now know as genes a term coined in 1909 by Wilhelm Johannsen that was widely accepted During the 1930s and 40s the findings of great proponents of genetics and evolution such as Mendel Darwin Wallace Fisher Haldane Wright Dobzhansky Mayr and several others were brought together to form the neo Darwinian synthesis In addition in the 40s genetics started its molecular revolution which in the late 70s driven by sequencing technology gave rise to the genomics era It took approximately 100 years to formulate the theoretical foundations of genetics to understand how information is transmitted to the next generations Now less than 45 years after the beginning of the genomic era science is fully capable of identifying complete genomes Among animals fishes are one of the most relevant groups in genetic studies Although fish studies were important in applying and corroborating Mendel s findings in the first decades of the 19th century these studies contributed little to the development of classical genetics However fish have been of great importance for the development of molecular genetics Several species such as *Carassius auratus* *Oryzias latipes* and *Danio rerio* among several others of productive interest such as *Salmo salar* *Oreochromis niloticus* and *Cyprinus carpio* have been used around the world as biological models These models can be used for the study of genes and genomes epigenetics and genetic expression Genetic studies using fish in addition to increasing genetic knowledge about the species also serve for a better general understanding of the physiology of metabolic pathways diseases evolution systematics dispersion creation and selection of individuals and lineages Considering this this Research Topic aims to bring together studies that present applications of fish as targets in genetic studies *Car and Driver* ,1986 **Future Music** ,2004 **Electronic Musician** ,1998 **Jahresbericht über die wissenschaftliche Biologie** ,1928 **The Agricultural Sky** K. R. Krishna,2023-06-02 The agricultural sky is a dominant natural entity that has influenced interacted with and guided the evolution of crops farming practices and cropping systems The sky and all its components above and near agricultural areas is an important

aspect of an agricultural enterprise as important as soils water and crop species The blue sky above crops that is seemingly clear tranquil or sometimes filled with clouds is really a repository of a large number of gases mineral or organic particulate matter dust mist turbulent wind innumerable species of micro organisms tiny biotic flora fauna seeds insects etc The agrarian sky supports complex interactions of biotic and abiotic aspects with perhaps immediate and or delayed influence on crops sown on the ground This volume helps us to better understand the importance of the sky above crop fields with the goal to encourage revolutionary agronomic procedures that lead to higher yield It is a comprehensive treatise on the agriculture sky covering basic definitions limits and explanations about atmospheric layers like troposphere stratosphere and the phyllosphere The volume addresses the nutrient dynamics in the sky and their relevance to crop productivity It looks at both natural biotic and manmade abiotic factors in the sky and how they affect what goes on below such as from dust storms at cloudy and or windy locations and from high altitude jet streams The author discusses wind and solar power generation in the agrarian sky and explores aeroponics to revolutionize crop production The volume delves into several types of aerial robots employing AI and other technology to provide aerial spectral data that are capable of analyzing procedures soil conditions irrigation insect pests weed detection herbicide application soil fertility and much more The book includes examples from the North American Great Plains Pampas of Argentina Sahelian production zones of West Africa Indo Gangetic Plains etc This eye opening book *The Agricultural Sky A Concept to Revolutionize Farming* will be useful to students and professors in universities as well as to researchers in industry dealing with aerial aspects of farming
