Econometric Analysis of Cross Section and Panel Data, second edition Jeffrey M. Wooldridge, 2010-10-01 The second edition of a comprehensive state-of-the-art graduate-level text on microeconomic methods, substantially revised and updated. The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research: cross-section and data-panel methods. By focusing on assumptions that can be given behavioral content, the book maintains an

appropriate level of rigor while emphasizing intuitive thinking The analysis covers both linear and nonlinear models including models with dynamics and or individual heterogeneity In addition to general estimation frameworks particular methods of moments and maximum likelihood specific linear and nonlinear methods are covered in detail including probit and logit models and their multivariate Tobit models models for count data censored and missing data schemes causal or treatment effects and duration analysis Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on microeconomic data structures allowing assumptions to be separated into population and sampling assumptions This second edition has been substantially updated and revised Improvements include a broader class of models for missing data problems more detailed treatment of cluster problems an important topic for empirical researchers expanded discussion of generalized instrumental variables GIV estimation new coverage based on the author s own recent research of inverse probability weighting a more complete framework for estimating treatment effects with panel data and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields New attention is given to explaining when particular econometric methods can be applied the goal is not only to tell readers what does work but why certain obvious procedures do not The numerous included exercises both theoretical and computer based allow the reader to extend methods covered in the text and discover new insights

Simoff,2016-04-19 Going beyond performing simple analyses researchers involved in the highly dynamic field of computational intelligent data analysis design algorithms that solve increasingly complex data problems in changing environments including economic environmental and social data Computational Intelligent Data Analysis for Sustainable Development presents novel methodologies for automatically processing these types of data to support rational decision making for sustainable development Through numerous case studies and applications it illustrates important data analysis methods including mathematical optimization machine learning signal processing and temporal and spatial analysis for quantifying and describing sustainable development problems With a focus on integrated sustainability analysis the book presents a large scale quadratic programming algorithm to expand high resolution input output tables from the national scale to the multinational scale to measure the carbon footprint of the entire trade supply chain It also quantifies the error or dispersion between different reclassification and aggregation schemas revealing that aggregation errors have a high concentration over specific regions and sectors The book summarizes the latest contributions of the data analysis community to climate change research A profuse amount of climate data of various types is available providing a rich and fertile

playground for future data mining and machine learning research The book also pays special attention to several critical challenges in the science of climate extremes that are not handled by the current generation of climate models It discusses potential conceptual and methodological directions to build a close integration between physical understanding or physics based modeling and data driven insights The book then covers the conservation of species and ecologically valuable land A case study on the Pennsylvania Dirt and Gravel Roads Program demonstrates that multiple objective linear programming is a more versatile and efficient approach than the widely used benefit targeting selection process Moving on to renewable energy and the need for smart grids the book explores how the ongoing transformation to a sustainable energy system of renewable sources leads to a paradigm shift from demand driven generation to generation driven demand It shows how to maximize renewable energy as electricity by building a supergrid or mixing renewable sources with demand management and storage It also presents intelligent data analysis for real time detection of disruptive events from power system frequency data collected using an existing Internet based frequency monitoring network as well as evaluates a set of computationally intelligent techniques for long term wind resource assessment In addition the book gives an example of how temporal and spatial data analysis tools are used to gather knowledge about behavioral data and address important social problems such as criminal offenses It also applies constraint logic programming to a planning problem the environmental and social impact assessment of the regional energy plan of the Emilia Romagna region of Italy Sustainable development problems such as global warming resource shortages global species loss and pollution push researchers to create powerful data analysis approaches that analysts can then use to gain insight into these issues to support rational decision making This volume shows both the data analysis and sustainable development communities how to use intelligent data analysis tools to address practical problems and encourages researchers to develop better methods
