Solved and Unsolved Problems of Structural Chemistry Milan Randic, Marjana Novic, Dejan Plavsic, 2016-04-21 Solved and Unsolved Problems of Structural Chemistry introduces new methods and approaches for solving problems related to molecular structure. It includes numerous subjects such as aromaticity, one of the central themes of chemistry, and topics from bioinformatics such as graphical and numerical characterization of DNA proteins and proteomes. It is a **Unsolved**

Problems in Number Theory Richard Guy, 2004-07-13 Mathematics is kept alive by the appearance of new unsolved problems. This book provides a steady supply of easily understood, if not easily solved, problems that can be considered in varying depths by mathematicians at all levels of mathematical maturity. This new edition features lists of references to OEIS and Neal Sloane's Online Encyclopedia of Integer Sequences at the end of several of the sections. **Problems in Applied**

Mathematics Murray S. Klamkin, 1990-01-01 A compilation of 380 of SIAM Review's most interesting problems dating back to the journal's inception in 1959. **Convex Analysis and Variational Problems** Ivar Ekeland, Roger

Temam, 1999-12-01 No one working in duality should be without a copy of *Convex Analysis and Variational Problems*. This book contains different developments of infinite dimensional convex programming in the context of convex analysis, including duality, minmax, and Lagrangians, and convexification of nonconvex optimization problems in the calculus of variations in infinite dimension. It also includes the theory of convex duality applied to partial differential equations; no other reference presents this in a systematic way. The minmax theorems contained in this book have many useful applications, in particular the robust control of partial differential equations in finite time horizon. First published in English in 1976, this SIAM Classics in Applied Mathematics edition contains the original text along with a new preface and some additional references. *Operator*

Theoretical Methods and Applications to Mathematical Physics Israel Gohberg, Antonio, F. dos Santos, Frank-Olme Speck, Francisco Sepulveda Teixeira, Wolfgang L. Wendland, 2012-12-06 This volume is devoted to the life and work of the applied mathematician Professor Erhard Meister (1930-2001). He was a member of the editorial boards of this book series *Operator Theory: Advances and Applications* as well as of the journal *Integral Equations and Operator Theory*, both published by Birkhäuser, now part of Springer Verlag. Moreover, he played a decisive role in the foundation of these two series by helping to establish contacts between Birkhäuser and the founder and present chief editor of this book series after his emigration from Moldavia in 1974. The volume is divided into two parts. Part A contains reminiscences about the life of E. Meister, including a short biography and an exposition of his professional work. Part B displays the wide range of his scientific interests through eighteen original papers contributed by authors with close scientific and personal relations to E. Meister. We hope that a great part of the numerous features of his life and work can be rediscovered from this book. **Notes and**

Problems in Number Theory (Volume I) Taha Sochi, 2023-10-22 This book is the first volume of a collection of notes and solved problems about number theory. Like my previous books, maximum clarity was one of the main objectives and criteria in

determining the style of writing presenting and structuring the book as well as selecting its contents Modest mathematical background knowledge is required for understanding most of the contents of the book In fact the book in most parts requires no more than a college or secondary school level of general mathematics So the intended readers of the book are primarily college or A level students as well as junior undergraduate students e g in mathematics or science or engineering The book can be used as a text or as a reference for an introductory course on this subject and may also be used for general reading in mathematics The book may also be adopted as a source of pedagogical materials which can supplement for instance tutorial sessions e g in undergraduate courses on mathematics or science

The Reception Of Unconventional Science Seymore H Mauskopf,2019-06-26 The issue of perhaps greatest concern to historians of science today is the internalist externalist dichotomy This volume directly addresses that issue at the same time providing a context for the serious study of heterodox science and scientific theories The book consists of four studies each of which considers the response of a scientific community to an unconventional theory or claim the acausal physics of Heisenberg Wegener s geological theory of continental drift acupuncture and the statistical argument for extrasensory perception As they reveal a wide range of reactions to orthodoxy the studies themselves exemplify the range of approaches the historian may use in examining scientific unconventionality

Case-Based Reasoning Research and Development David B. Leake,Enric Plaza,1997-07-09 This book constitutes the refereed proceedings of the Second International Conference on Case Based Reasoning ICCBR 97 held in Providence RI USA in July 1997 The volume presents 39 revised full scientific papers selected from a total of 102 submissions also included are 20 revised application papers Among the topics covered are representation and formalization indexing and retrieval adaptation learning integrated approaches creative reasoning CBR and uncertainty This collection of papers is a comprehensive documentation of the state of the art in CBR research and development

Lost and Found Ross W. Greene,2016-03-28 Implement a more constructive approach to difficult students Lost and Found is a follow up to Dr Ross Greene s landmark works The Explosive Child and Lost at School providing educators with highly practical explicit guidance on implementing his Collaborative Proactive Solutions CPS Problem Solving model with behaviorally challenging students While the first two books described Dr Greene s positive constructive approach and described implementation on a macro level this useful guide provides the details of hands on CPS implementation by those who interact with these children every day Readers will learn how to incorporate students input in understanding the factors making it difficult for them to meet expectations and in generating mutually satisfactory solutions Specific strategies sample dialogues and time tested advice help educators implement these techniques immediately The groundbreaking CPS approach has been a revelation for parents and educators of behaviorally challenging children This book gives educators the concrete guidance they need to immediately begin working more effectively with these students Implement CPS one on one or with an entire class Work collaboratively with students to solve problems Study sample dialogues of CPS in action Change the way difficult students

are treated The discipline systems used in K 12 schools are obsolete and aren't working for the kids to whom they're most often applied those with behavioral challenges Lost and Found provides a roadmap to a different paradigm helping educators radically transform the way they go about helping their most challenging students

Open Problems in Mathematics and Computational Science Çetin Kaya Koç, 2015-03-25 This book presents interesting important unsolved problems in the mathematical and computational sciences The contributing authors are leading researchers in their fields and they explain outstanding challenges in their domains first by offering basic definitions explaining the context and summarizing related algorithms theorems and proofs and then by suggesting creative solutions The authors feel a strong motivation to excite deep research and discussion in the mathematical and computational sciences community and the book will be of value to postgraduate students and researchers in the areas of theoretical computer science discrete mathematics engineering and cryptography

Inconsistency in Linguistic Theorising András Kertész, Csilla Rákosi, 2022-07-07 This book is the first systematic analysis of the emergence of and the resolution strategies for inconsistency in linguistic theorizing

Solving the Frame Problem Murray Shanahan, 1997 In 1969 John McCarthy and Pat Hayes uncovered a problem that has haunted the field of artificial intelligence ever since the frame problem The problem arises when logic is used to describe the effects of actions and events Put simply it is the problem of representing what remains unchanged as a result of an action or event Many researchers in artificial intelligence believe that its solution is vital to the realization of the field's goals Solving the Frame Problem presents the various approaches to the frame problem that have been proposed over the years The author presents the material chronologically as an unfolding story rather than as a body of theory to be learned by rote There are lessons to be learned even from the dead ends researchers have pursued for they deepen our understanding of the issues surrounding the frame problem In the book's concluding chapters the author offers his own work on event calculus which he claims comes very close to a complete solution to the frame problem Artificial Intelligence series

Status, Network, and Structure Jacek Szmata, John Skvoretz, Joseph Berger, 1997 This book challenges much that has been written about the decline of sociology as a vital essential area of inquiry into the human condition Against this Greek chorus of woe these papers show by example that sociology can make progress select significant problems and cumulate an integrated and coherent set of findings and theoretical understandings Although the twenty papers in the book engage a wide variety of issues they are united by their adherence to one of the most active and successful traditions in sociology the group process tradition Group process research programs can examine tractable problems posed by social psychological phenomena for which sociology has the best methods of study they have the potential for a hardware based technological research front that discovers new phenomena and they come closest of all approaches in sociological research to using cognitive criteria in the choice of problems and to studying immutable phenomena The overall aim of the book is to provide models for researchers struggling to develop construct and integrate coherent sociological theory and knowledge The papers are grouped around

three themes 1 the problem of theory construction in sociology including what is meant by theory and the methods of testing it particularly empirical testing 2 the extension and elaboration of existing theories of group processes notably in the study of status sentiment and the comparison process and 3 the theoretical issues at the intersection of social structures the pattern of connection in social networks and the process of rational choice Convex Analysis and Variational Problems ,1976-01-01

Convex Analysis and Variational Problems Recent Developments in Integrable Systems and Riemann-Hilbert Problems Kenneth T-R McLaughlin,Xin Zhou,2003 This volume is a collection of papers presented at a special session on integrable systems and Riemann Hilbert problems The goal of the meeting was to foster new research by bringing together experts from different areas Their contributions to the volume provide a useful portrait of the breadth and depth of integrable systems Topics covered include discrete Painleve equations integrable nonlinear partial differential equations random matrix theory Bose Einstein condensation spectral and inverse spectral theory and last passage percolation models In most of these articles the Riemann Hilbert problem approach plays a central role which is powerful both analytically and algebraically The book is intended for graduate students and researchers interested in integrable systems and its applications **Fundamental Problems and Solutions in Finance** Zhiqiang Zhang,2023-04-27 This book provides

innovative solutions to fundamental problems in finance such as the valuation of bond and equity the pricing of debt equity and total asset the determination of optimal capital structure etc which are unsolved or poorly solved so far The solutions in this book all have the following features Based on essential assumptions in line with reality the final solutions are analytical solutions with closed form models the forms and variables of the models are determined by strict and objective logic processes rather than chosen or presumed subjectively such as the new growth model for stock valuation the new CAPM accounting for total risk rather than only systematic risk the real solution to optimal capital structure based on the trade off between tax shield and bankruptcy cost In addition these basic solutions or models are adjusted easily to various application scenarios A Computational Perspective on Visual Attention John K. Tsotsos,2021-06-22 The derivation exposition and

justification of the Selective Tuning model of vision and attention Although William James declared in 1890 Everyone knows what attention is today there are many different and sometimes opposing views on the subject This fragmented theoretical landscape may be because most of the theories and models of attention offer explanations in natural language or in a pictorial manner rather than providing a quantitative and unambiguous statement of the theory They focus on the manifestations of attention instead of its rationale In this book John Tsotsos develops a formal model of visual attention with the goal of providing a theoretical explanation for why humans and animals must have the capacity to attend He takes a unique approach to the theory using the full breadth of the language of computation rather than simply the language of mathematics as the formal means of description The result the Selective Tuning model of vision and attention explains attentive behavior in humans and provides a foundation for building computer systems that see with human like

characteristics The overarching conclusion is that human vision is based on a general purpose processor that can be dynamically tuned to the task and the scene viewed on a moment by moment basis Tsotsos offers a comprehensive up to date overview of attention theories and models and a full description of the Selective Tuning model confining the formal elements to two chapters and two appendixes The text is accompanied by more than 100 illustrations in black and white and color additional color illustrations and movies are available on the book s Web site [The Routledge International Handbook of Changes in Human Perceptions and Behaviors](#) Kanako Taku,Todd K.
