[Continuous-Time Random Walks for the Numerical Solution of Stochastic Differential Equations](#) Nawaf Bou-Rabee, Eric Vanden-Eijnden, 2019-01-08 This paper introduces time continuous numerical schemes to simulate

stochastic differential equations SDEs arising in mathematical finance population dynamics chemical kinetics epidemiology biophysics and polymeric fluids These schemes are obtained by spatially discretizing the Kolmogorov equation associated with the SDE in such a way that the resulting semi discrete equation generates a Markov jump process that can be realized exactly using a Monte Carlo method In this construction the jump size of the approximation can be bounded uniformly in space which often guarantees that the schemes are numerically stable for both finite and long time simulation of SDEs
