Shifting Mobility Dewan Masud Karim,2025-03-13 Embark on a journey into the heart of a new industrial revolution one that promises to redefine human mobility for generations to come In this groundbreaking exploration we confront the promises and perils of new mobility navigating the intricate landscape where technology intersects with urban society As cities evolve and technology shapes our daily lives the ethical dimensions of this transformation remain largely uncharted territory Amidst the rapid advancement of new mobility systems this book sheds light on the moral dilemmas and philosophical underpinnings that often go unnoticed From the ethical implications of technology to the systemic flaws in planning and design we delve into the core of this paradigm shift By understanding the foundational principles of mobility and the hidden codes that govern human movement we pave the way for a more equitable and inclusive future At the heart of this transformative vision lies a comprehensive framework for building a new mobility ecosystem one that prioritizes human well being and equity above all else Through innovative planning processes and redesign concepts we aim to bridge the gap between technology and society ensuring that every individual has access to safe efficient and sustainable modes of transportation From low emission vehicles to multimodal transit hubs this book presents a blueprint for reimagining urban spaces and redefining the way we move By embracing shared values and collective responsibility we strive to create a world where mobility is not just a privilege but a fundamental human right As we embark on this journey towards a more sustainable future let us remember that the true measure of progress lies not in technological innovation alone but in our ability to build communities that thrive together Join us in shaping the future of mobility one where humanity and equity reign supreme **The Transportation Right of Way** Robert S. Gilchrist,2025-09-02 Rethinking Transportation Design Operation and Regulation Too often transportation systems fail the very people they are meant to serve Although engineers and policymakers design systems based on industry standards real world users drivers cyclists and pedestrians face hazards that are often overlooked From poorly maintained winter roads to a misalignment in expected versus actual usage due to

human factors these oversights put lives at risk Forensic transportation engineer Robert Gilchrist evaluates conventional thinking in transportation engineering through a human lens By discussing the disconnect between industry standards and real world conditions he encourages a user centric approach one that considers human factors environmental challenges and the true cost of system failures Through case studies regulation analysis and expert insights he challenges current practice and supports an adjustment of baseline thinking to improve safety and decision making With decades of experience investigating transportation failures Gilchrist provides a compelling accessible guide for engineers policymakers lawyers and system users alike to inspire safer smarter transportation systems *Proceedings of the Canadian Society of Civil Engineering Annual Conference 2021* Scott Walbridge,Mazdak Nik-Bakht,Kelvin Tsun Wai Ng,Manas Shome,M.
