SR504-4 Switching Relay

102-381

SUPERSEDES: March 1, 2013

EFFECTIVE: December 20, 2013

Plant ID# 9300-2868

Cold Start Boiler Application:

Operation: When any thermostat calls for heat, the appropriate circulator is energized and the isolated end switch (X and X) will start the boiler.

Priority Operation: When zone 4 is switched to the priority setting and is actuated, all other zones will stop operation until zone 4 is satisfied. When zone 4 is not switched to priority, all zones will operate independently.

Priority Protection Operation: When the priority switch is set to ON, and if the priority zone calls continuously for more than one hour, power is returned to all the other zones, allowing each zone to function independently. Once the priority zone is satisfied, the control's auto-reset is activated and the priority zone is again allowed to have priority for up to one hour starting from when it calls next.

Jumper Placement: The jumper should be placed between terminals 2C and 2R. Connect the isolated end switch to the aquastat control on the boiler.

Power Input: Connect 120 volt ac power input to terminals N and H. Neutral wire to terminal N. Hot wire to terminal H.

NOTE: Resistor (1KΩ, 1/2 W) may be needed between W and C terminals.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

WARNING: Wiring connections must be made in accordance with all applicable electrical codes. Use copper wire only. 120 VAC wiring must have a minimum temperature rating of 75°C. Failure to follow this instruction can result in personal injury or death and/or property damage. 12-18 gauge wire recommended for 120 VAC connections, 14-22 gauge wire for thermostat connections, and 14-22 gauge wire for 24 VAC source connections.

Specifications:

PRODUCT NUMBER	POWER SUPPLY	INPUT VOLTAGE	MAXIMUM CONTINUED LOAD	TYPE 1 ENCLOSURE	DEPTH
SR504-4	4 ON ZONES	120/240 VAC	20 amps	18 1/2" x 18 1/2" x 1 1/2"	2 1/2"

All circulator relay connections, including 2C/2R, are rated to hp (6 FLA, 36 UBA) at 120 VAC. End switch connections are rated 24 VAC, 5 amp.

All thermostat connections supply a 24 VAC class 2 output.

For information on Taco's Switching Relays (SR) including catalog sheet, instruction sheets, Visio stencils and our highly praised Zone Controls Wiring Guide, scan the QR code to the left or go to our website: <http://www.taco-hvac.com>.

Tankless Coil Boiler Application: (Alternative Wiring)

Operation: When any thermostat calls for heat, the boiler is given a signal to start. The appropriate circulator is energized only when the boiler temperature is above the set low limit.

Priority Operation: When zone 4 is switched to the priority setting and is actuated, all other zones will stop operation until zone 4 is satisfied. When zone 4 is not switched to priority, all zones will operate independently.

Priority Protection Operation: When the priority switch is set to ON, and if the priority zone calls continuously for more than one hour, power is returned to all the other zones, allowing each zone to function independently. Once the priority zone is satisfied, the control's auto-reset is activated and the priority zone is again allowed to have priority for up to one hour starting from when it calls next.

Jumper Placement: REMOVE the jumper between terminals 2C and 2R. Connect terminal 2C to 2C on the aquastat control. Connect terminal 2R to 2R on the aquastat control. Confirm polarity is consistent between boiler aquastat and switching relay.

Power Input: Connect 120 volt ac power input to terminals N and H. Neutral wire to terminal N. Hot wire to terminal H.

WARNING: When using Alternative Wiring diagram, wiring instructions must be followed so power originates from the boiler aquastat. Failure to follow these wiring instructions may result in a secondary source of power being connected to the boiler that may activate in under certain circumstances, causing injury or death.

Troubleshooting:

- Problem:** Digital thermostats do not work correctly when connected to a switching relay.
- Solution:** Some thermostats are a "Power Sealing" type which means they are powered by the switching relay with just 2 wires (R & W). A resistor may be needed in order to have the thermostat work properly. This resistor should be placed between the W & C (common) terminals of the switching relay. If the thermostat manufacturer does not supply a resistor, a 1000 ohm 1/2 watt resistor has proven to work with most models and is readily available at electronic supply outlets (e.g. Radio Shack). If the thermostat is battery powered, then check that the batteries are fresh and installed correctly.
- Problem:** No heat in a zone or rooms of building.
- Solution:** LED diagnostic lights will help find a component that is not working properly. The green LED should always be on, indicating that power is connected and the solid-state fuse is good. When there is a call for heat, the red LED will come on indicating power to the zone circulator. This indicates the thermostat is working correctly. If the red LED does not come on, then check the thermostat and thermostat wiring for errors.
